Software Process: Principles, Methodology, and Technology Jean-Claude Derniame, Badara A. Kaba, David Wastell, 2006-08-18 1 Jean Claude Derniame Software process technology is an emerging and strategic area that has already reached a reasonable degree of maturity delivering products and significant industrial experiences This technology aims at supporting the software production process by providing the means to model analyse improve measure and whenever it is reasonable and convenient to automate software production activities In recent years this technology has proved to be effective in the support of many business activities not directly related to software production but relying heavily on the concept of process i e all the applications traditionally associated with workflow management This book concentrates on the core technology of software processes its principles and concepts as well as the technical aspect of software process support The contributions to this book are the collective work of the Promoter 2 European Working Group This grouping of 13 academic and 3 industrial partners is the successor of Promoter a working group responsible for creating a European software process community Promoter 2 aims at exploiting this emerging community to collectively develop remaining open issues to coordinate activities and to assist in the dissemination of results The title Software Process Modelling and Technology Fink94 was produced during Promoter 1 Being project based it presented the main findings and proposals of the different projects then being undertaken by the partners

Software Process Technology, 1992

Process Technologies Method and Tool Report, 1994 In this era of increasingly complex software and mushrooming

software development and maintenance costs the software engineering community needs to improve its practices to remain competitive and to produce software that can meet complex software requirements Projects often overrun costs miss deadlines and fail to meet the requirements of the customer Now new software process technologies are evolving to help address these concerns in the areas of process assessment definition simulation and enactment A software process is a set of activities methods practices and transformations that people use to develop and maintain software and associated products The quality of a product stems in large part from the quality of the process used to create it To consistently improve products the process used for developing them should be understood defined measured and progressively improved Software process assessment is the act of determining the maturity of an organization s software process Software process definition is the act of specifying in some detail an organization s software process Software process simulation is the act of executing a software process definition The term modeling will often be used in this report to encompass both process definition and simulation The term enactment denotes the use of a formal process definition to guide and control the software process In this report software process technologies will be described their benefits outlined and their implications assessed Technology maturity will be discussed and recommendations will be given for technologies that can be effectively used today
