Crafting Efficiency in Managerial Costing System Design Pieter W. Buys, 2024-03-25 This book focuses on an integrated approach in developing a model to guide the design of effective managerial costing systems While the focus is on the manufacturing industry information in the book will be useful to other industries as well To achieve this the book utilizes the action design research methodology founded within a design science paradigm which aims to develop pragmatic solutions to an actually experienced business problem or class of business problems After which the book then explains the elaborated action design research process which is a researcher practitioner approach to designing pragmatic industry experienced problems in an academically sound manner In doing so the book illustrates how a design process embedded in the engineering field i e design science research can successfully engineer effective managerial costing systems The book thus includes both academic researchers and industry practitioners applying the contextual iterative solution development activities i e i problem formulation and refinement ii the solution design and iii verification and validation of the proposed solution The final proposed solution presented in the book is presented in a process model format including systematic process flow illustrations and developmental guides which are all supportive in enabling the design of effective managerial costing systems

Non-Functional Requirements in Software Engineering Lawrence Chung, Brian A. Nixon, Eric Yu, John Mylopoulos, 2012-12-06 Non Functional Requirements in Software Engineering presents a systematic and pragmatic approach to building quality into software systems Systems must exhibit software quality attributes such as accuracy performance security and modifiability However such non functional requirements NFRs are difficult to address in many projects even though there are many techniques to meet functional requirements in order to provide desired functionality This is particularly true since the NFRs for each system typically interact with each other have a broad impact on the system and may be subjective To enable developers to systematically deal with a system s diverse NFRs this book presents the NFR Framework Structured graphical facilities are offered for stating NFRs and managing them by refining and inter relating NFRs justifying decisions and determining their impact Since NFRs might not be absolutely achieved they may simply be satisfied sufficiently satisfied To reflect this NFRs are represented as softgoals whose interdependencies such as tradeoffs and synergy are captured in graphs The impact of decisions is qualitatively propagated through the graph to determine how well a chosen target system satisfies its NFRs Throughout development developers direct the process using their expertise while being aided by catalogues of knowledge about NFRs development techniques and tradeoffs which can all be explored reused and customized Non Functional Requirements in Software Engineering demonstrates the applicability of the NFR Framework to a variety of NFRs domains system characteristics and application areas This will help readers apply the Framework to NFRs and domains of particular interest to them Detailed treatments of particular NFRs accuracy security and performance requirements along with treatments of NFRs for information systems are presented as specializations of the NFR Framework Case studies of NFRs for a variety of information systems include credit card and administrative systems The use of the Framework for particular application areas is illustrated for software architecture as well as enterprise modelling Feedback from domain experts in industry and government provides an initial evaluation of the Framework and some case studies Drawing on research results from several theses and refereed papers this book s presentation terminology and graphical notation have been integrated and illustrated with many figures Non Functional Requirements in Software Engineering is an excellent resource for software engineering practitioners researchers and students
