What Is Cool?

No one can truly understand the sensation of jumping directly onto a turtle, but this is just one of many characteristics bestowed upon the main character in the book *Super Plumber Guy*. The book depicts a brightly lit world of wonder, fungi, and amphibians in varying biomes. While the main character, Mr. Plumber, is depicted as an everyman, his distinct look, style, and behaviors as described in the book show that he is anything but.

Mr. Plumber was originally written as something of an everyday character that the reader could embody. He has no true personality, nor does he have a voice, often allowing secondary characters around him to fill in the gaps. The reader does know that he wears a brightly colored hat, jumps high, and enjoys mushrooms. These are humble characteristics that bring out the humanity of the character. Most people are not a list of unique characteristics but a mosaic of smaller idiosyncrasies.

Super Plumber Guy remains a popular read containing a human character that many might consider boring or free of personality. However, Mr. Plumber is an exceedingly human character who acts as a blank slate for the reader. Diving deeper into other characters and their interactions with him may glean further insight into Mr. Plumber's motivations and inner psychology.

Recent Advances in Pharmaceutical Analysis: Applications and New Challenges for the Quality of Medicines Federica Aureli,Anna Borioni,Maria-Elisa Crestoni,Birgit Hakkarainen ,Constantinos K. Zacharis,2025-11-18 Analytical chemistry in pharmaceutical analysis deals with the investigation of bulk drug materials active pharmaceutical ingredients intermediates

drug products including their impurities and degradation products to address the different qualitative and quantitative descriptors of medicines. This task falls in the overarching concept of quality which is crucial to ensure that safe and effective drugs are released to the market. Analytical chemistry plays a fundamental role in supporting the thorough characterization of medicines used in the toxicological clinical studies and in the market. The recent outbreak of nitrosamines impurities highlighted the challenges of measuring minute concentrations at low detection limits in complex matrices. Recently several approaches have been developed to address the multifaceted features of the quality of medicines as structural analysis, content impurity profile including stereochemical impurities, suitability of the container closure systems and degradation patterns. However, new challenges continue to emerge and a number of knowledge gaps are still at the forefront of the scientific and regulatory community. The analytical needs are multifaceted. In pharmaceutical research, the characterization and monitoring of impurities including polymorphic forms, stereoisomers are in focus of the quality domain, being the latter difficult to address due to structural similarities with the active substance. Furthermore, the control of small amounts of potentially toxic impurities in finished products is often challenging and requires specific and sensitive analytical methods. The application of nanotechnologies in drug development may require complementary techniques to address nanospecific issues. On the regulatory side, the annual marketing surveillance programmes for human and veterinary medicines entail high throughput techniques to screen the ever increasing number of samples with variable compositions. The substandard production and falsification of human and veterinary medicines are still on the increase, therefore fast and reliable screening tools for the unambiguous identification and quantitation of declared or undeclared active substances are necessary. In all cases, untargeted analytical approaches could show unexpected impurities at undue levels. Therefore, advances in hyphenated techniques such as gas GC and liquid LC chromatography coupled to mass spectrometry MS, nuclear magnetic resonance NMR, Fourier transform infrared FTIR, Inductively Coupled Mass Spectrometry ICP MS, Raman spectroscopy, to name the most common, are promising areas of research. The goal of this Research Topic is to explore major breakthroughs and novel applications of analytical chemistry to address new challenges and recent advances in pharmaceutical analysis. Different analytical methodologies encompassing innovative and suitable chemical approaches will be gathered to support optimized sample preparation, protocols, detection, quantification, data processing and statistical analysis. Special attention will be paid to inorganic and organic mass spectrometry, spectroscopy, e.g. NMR, IR, Raman and chromatography, in order to build knowledge on chemical medicines, peptides, polysaccharides and herbal products. The proposed research will have the potential to be recognized as a scientific benchmark for assessing the quality of medicines. This Research Topic collection will cover chromatographic, fractionation, spectroscopic, spectrometric, omic sciences, elemental analysis, multivariate statistical and chemometric tools applied in the analysis of pharmaceuticals. Quantitative and qualitative analyses that include sample preparation, analytical instrumentation and data processing will also be considered. Lastly, applications to case studies and
