Spread Spectrum Systems Robert Clyde Dixon, 1984 **FCC Record** United States. Federal Communications Commission, 2000 **Perspectives in Spread Spectrum** Amer A. Hassan, John E. Hershey, Gary J. Saulnier, 2012-12-06

Perspectives in Spread Spectrum brings together studies and recent work on six exciting topics from the spread spectrum arts. The book gives a wide collective view of trends, ideas, and techniques in the spread spectrum discipline due to the authors' extensive work on spread spectrum techniques and applications from different vantage points. The inexorable march of electronics towards ever faster, ever smaller, and ever more powerful electronic and optical circuitry has wrought and will continue to enable profound changes in the spread spectrum arts by allowing increasingly complex signalling waveforms and statistical tests to be implemented as the theory beyond spread spectrum continues to evolve.

Perspectives in Spread Spectrum is divided into six chapters. The first chapter deals with sequence spreading design. There is not a single metric for design of spreading sequences; rather, the design is ideally tailored to the specific scenario of usage. This chapter delves into recent and very promising synthesis work. The second chapter deals with OFDM techniques. As channels become wider and trans channel fading or jamming becomes frequency selective across the band, OFDM techniques may provide a powerful alternative design perspective. The third chapter is a generalization of the venerable Walsh functions. A new modulation scheme, Geometric Harmonic Modulation (GHM) for short, is reviewed and characterized as a form of OFDM. From GHM, a further generalization of the Walsh functions is derived for non-binary signalling. The fourth chapter is concerned with some new and exciting results regarding the follower jammer paradigm. A counter-countermeasure technique is reviewed, notable for its counterintuitive characteristic which can be understood from a simple yet elegant game framework. The fifth chapter recounts some results pertaining to random coding for an optical spread spectrum link. The technique is based on laser speckle statistics and uses a coherent array of spatial light modulators at the transmitter but allows the receiver to be realized as a spatially distributed radiometric and therefore incoherent structure. The sixth and final chapter looks at an important and interesting application of spread spectrum to accurately locate a wideband bent pipe satellite transponder. It is, in a strong sense, an inverted GPS technique.

Perspectives in Spread Spectrum serves as an excellent reference and source of ideas for further research and may be used as a text for advanced courses on the topic.

Fundamentals of Spread Spectrum Modulation Rodger E. Ziemer,2022-06-01 This lecture covers the fundamentals of spread spectrum modulation which can be defined as any modulation technique that requires a transmission bandwidth much greater than the modulating signal bandwidth independently of the bandwidth of the modulating signal After reviewing basic digital modulation techniques the principal forms of spread spectrum modulation are described One of the most important components of a spread spectrum system is the spreading code and several types and their characteristics are described The most essential operation required at the receiver in a spread spectrum system is the code synchronization which is usually broken down into the operations of acquisition and tracking Means for performing these operations are discussed next Finally the performance of spread spectrum systems is of fundamental interest and the effect of jamming is considered both without and with the use of forward error correction coding The presentation ends with consideration of spread spectrum systems in the presence of other users For more complete treatments of spread spectrum the reader is referred to 1 2 3
