Strengthening International Fisheries Law in an Era of Changing Oceans Richard Caddell, Erik J Molenaar, 2019-04-04

This collection addresses the central question of how the current international framework for the regulation of fisheries may be strengthened in order to meet the challenges posed by changing fisheries and ocean conditions in particular climate change International fisheries law has developed significantly since the 1990s through the adoption and establishment of international instruments and bodies at the global and regional levels Global fish stocks nevertheless remain in a troubling state and fisheries management authorities face a wide array of internal and external challenges including operational constraints providing effective management advice in the face of scientific uncertainty and non compliance by States with their international obligations This book examines these challenges and identifies options and pathways to strengthen international fisheries law While it has a primarily legal focus it also features significant contributions from specialists drawn from other disciplines notably fisheries science economics policy and international relations in order to provide a fuller context to the legal policy and management issues raised Rigorous and comprehensive in scope this will be essential reading for lawyers and non lawyers interested in international fisheries regulation in the context of profoundly changing ocean conditions

Laser Metallic Additive Manufacturing Technologies by Thermal-Mechanical Interaction Jinzhong Lu, Haifei Lu, Kaiyu Luo, 2024-10-22

This book introduces the laser hybrid additive manufacturing technology LHAM with alternately thermal and mechanical effects for the high performance manufacturing of key components Metal additive manufacturing AM technologies have made considerable progress in the basic theoretical field since its invention in the 1970s However there are still some difficulties in the

coordinated control of the structure and performance containing the challenges of structure control against deformation and cracking of the formed metallic components incurred by internal stress and performance control against poor fatigue property of formed metallic components incurred by metallurgical defects This book surveys the most relevant papers about the influence of laser shock wave on the microstructural evolution residual stress metallurgical defect and mechanical properties that have become the foundation to elucidate the principles and effects of LHAM technology This book is separated into four parts to fully present the LHAM technology The first part reviews the background of LHAM technology The second part explains the theoretical basis of the thermal effects of laser additive manufacturing LAM and mechanical effects of laser shock peening LSP The other two parts specifically describe the microstructural evolution residual stress metallurgical defect and mechanical properties using LHAM technology This book benefits the audience in the field of mechanical engineering and materials sciences since LHAM technology is suitable for the manufacturing and applications of the key components of aero engine The analysis in the book helps the audience deeply understand the mechanism of LHAM technology The authors unique thinking about LHAM technology also runs through the book which may enlighten the audience to further develop LHAM technology
