## **Textile Fabric Flammability:**

Textile Fabric Flammability Stanley Backer,1976-01 A report on fabric and garment flammability which represents a synthesis and overview of research conducted by four independent labs sponsored jointly by the Government Industry Research Committee on Flammable Fabrics and by the Office of Flammable Fabrics of the National Bureau of Standards It is intended as a reference document for fiber and textile technologists concerned with this problem The laboratories taking part in this cooperative program were the Factory Mutual Research Corporation teh School of Mechanical Engineering Georgia Institute of Technology the Harris Research Laboratories Department Gillette Research Institute and the Fuels Research Laboratory Department of Chemical Engineering MIT The overview group which compiled and integrated the results and produced this book was affiliated with the Department of Mechanical Engineering MIT Three specific aspects of the flammability problem are treated here fabric ignition the spreading of flames and burn injury to the human skin In addition an entire chapter is devoted to the characterization of fabric properties related to flammability The ignition phenomenon involves the complex processes of heat transfer thermal degradation fluid mechanics and chemical kinetics Thermoplastic behavior compounds this complexity when synthetic fabrics are involved The treatment of ignition outlined in this work is essentially physical omitting considerations of chemical kinetics and focusing on the prediction of ignition time of fabrics under known conditions of thermal exposure Flame propagation is discussed as a continuing ignition process Only those aspects of the flame propagation phenomenon both in fabric strips and in garments that are accessible through an experimental approach are dealt with Research on thermal burns of the human body also involves considerations of heat transfer to and thermal decomposition of the skin In this phase of the study attempts are made to predict depth and burn damage on the basis of thermal history at the skin surface Extensive experimental results are reported which provide insight into the mode and extent of heat transfer from burning fabrics and garments to skin simulants

Historically and persisting to this day there has been a barbaric attitude toward gruesome and fatal injuries from flammable  
fabrics Reliable burn injury data show hundreds of garment burn injury fatalities annually and morbidly painfully and  
permanently injured victims form flammable fabrics Industrial representatives argue that the total number of injuries is small  
and that the cost benefits to the vast majority preponderantly favor the status quo The children s sleepwear laws have  
dramatically reduced the frightful destructive injuries to innocent children and safer fabrics are appearing in the stream of  
commerce An effective warning label on dangerous garment fabrics would help build a market for safer clothing and enable  
the consumer to choose safer garments More importantly an effective warning label would reduce the number of dangerous  
flammable fabric victims This text places an emphasis on the value of a warning label which should be mandated on all new  
clothing to reduce the flammable fabric injuries and fatalities each year It is especially important to alert mothers of  
flammable fabric risk to protect their children Currently the largest fatality groups are children 2 5 years of age and senior  
citizens over age 65 The author hopes to promote the use of an effective warning label to circumvent fabric burn injuries and  
to reduce disfiguring and fatal burn injuries      **Textile Research Journal** ,1975      **Textiles. Fabrics for Apparel.**
