Top-Down Calculus S. Gill Williamson,1987-01-01 *Top-down Calculus* Stanley Gill Williamson,1987 This textbook was designed for a first course in differential and integral calculus and is directed toward students in engineering the sciences mathematics and computer science Its major goal is to bring students to a level of technical competence and intuitive understanding of calculus that is adequate for applying the subject to real world problems The text contains major sections on 1 linear functions and derivatives 2 computing derivatives 3 applications of derivatives 4 integrals and 5 infinite series The activities contained within these chapters are designed so that students can first study the exercise set and the solutions Next the students are asked to make modifications to the original problem solve it and move on to the variations The appendices include math tables additional reading and exercises solutions and hints to the exercises TW Relevancy Based Use of Lemmas in Connection Tableau Calculi Marc Fuchs,1999 Automated deduction is a fundamental research area in the field of artificial intelligence The aim of an automated deduction system is to find a formal proof for a given goal based on given axioms Essentially automated deduction can be viewed as a search problem which spans huge search spaces One main thrust of research in automated deduction is the development of techniques for achieving a reduction of the search space A particularly promising approach for search space reduction relies on the integration of top down and bottom up reasoning A possible approach employs bottom up generated lemmas in top down systems Lemma use offers the possibility to shorten proofs and to overcome weaknesses of top down systems like poor redundancy control In spite of the possible advantages of lemma use however naive approaches for lemma integration even tend to slow down top down systems The main problem is the increased indeterminism in the search process In this thesis important contributions for a successful application of lemmas in top down deduction systems based on connection tableau calculi are made New methods for lemma generation and for the estimation of the relevancy of lemmas are developed As a practical contribution the implementation of the new techniques leads to a powerful system for automated deduction which demonstrates the high potential of the new techniques
