Specification and Design of Fiber Reinforced Bridge Deck Forms for Use on Wide Flange T-girders ,2007 Wide flanged concrete girders are increasingly being used for highway bridges in Wisconsin The objective of this research was to understand the state of the art of non metallic SIP forms and to develop design guidelines and performance specifications that can be used locally for the construction of highway bridge decks Four major types of stay in place SIP forms using fiber reinforced concrete FRC or fiber reinforced polymer FRP materials were investigated fiber reinforcements grid reinforcements bar reinforcements and pultruded profiles The results were used to develop a model design and construction specification for non structural non metallic SIP forms in highway bridge decks Toughness Characterization and Criteria for Steel in Critical Applications E. A. Lange,1978 The fracture toughness of high strength low alloy HSLA steels and the conventional structural steels can vary over a wide range from an elastic to a plastic performance Prediction and certification of structural performance is discussed and a structural integrity technology which integrates linear elastic fracture mechanics LEM with the more metallurgically oriented empirical analyses is described Examples of the critical features of practical test methods are given to illustrate the advantages of using a new test the Dynamic Test DT test for characterization purposes Although test results for toughness characterization must be quantitative the requirements for toughness criteria in material specifications are usually not as restrictive unless structural performance must be certified Certification of a high level of structural performance will justify the use of high quality materials Author **Report of NRL Progress** Naval Research Laboratory (U.S.),1979 *MiCon 90* George F. Vander Voort,1991 **Analysis of Welded Structures** Koichi Masubuchi,2013-10-22 Analysis of Welded Structures Residual Stresses Distortion and their Consequences encompasses several topics related to design and fabrication of welded structures particularly residual stresses and distortion as well as their consequences This book first introduces the subject by presenting the advantages and disadvantages of welded structures as well as the historical overview of the topic and predicted trends Then this text considers residual stresses heat flow distortion fracture toughness and brittle and fatigue fractures of weldments This selection concludes by discussing the effects of distortion and residual stresses on buckling strength of welded structures and effects of weld defects on service behavior This book also provides supplementary discussions on some related and selected subjects This text will be invaluable to metallurgists welders and students of metallurgy and welding **Guide Specifications for Fracture Critical Non-redundant Steel Bridge Members** American Association of State Highway and Transportation Officials,1978 Echinoderms: Munchen Thomas Heinzeller,James H.
