**Nuclear Energy and Global Governance** Trevor Findlay,2010 *Nuclear Power* David Elliott,2017-05-02 This book looks at the early history of nuclear power at what happened next and at its longer term prospects The main question is can nuclear power overcome the problems that have emerged It was once touted as the ultimate energy source freeing mankind from reliance on dirty expensive fossil energy Sixty years on nuclear only supplies around 11.5% of global energy and is being challenged by cheaper energy options While the costs of renewable sources like wind and solar are falling rapidly nuclear costs have remained stubbornly high Its development has also been slowed by a

range of other problems including a spate of major accidents security concerns and the as yet unresolved issue of what to do with the wastes that it produces In response a new generation of nuclear reactors is being developed many of them actually revised versions of the ideas first looked at in the earlier phase Will this new generation of reactors bring nuclear energy to the forefront of energy production in the future

*Nuclear Energy in India's Energy Security Matrix* Maj Gen Ajay Kumar Chaturvedi AVSM, VSM (Retd), 2014-03-03 Energy is essential for the economic growth of a nation Its absence or deficiency makes a nation highly vulnerable to international arms twisting as well as internal disturbances As such it is an important element in a nation s security matrix India which is in the lower half of the countries as far as the energy consumption per capita is concerned One of major reasons is the gap between the demand and the capacity of the country to supply the energy from indigenous sources One of the important sources that hold promise in Indian context is the nuclear energy as it is clean and the resource thorium to produce power through this route is available indigenously However despite a well developed plan for energy conversion in place using indigenous resources for over half a century it is still considered only promising Relevant questions in this regard are whether perceived promise is realizable If so in what time frame and at what cost Will it be safe keeping in view its capacity to cause wide spread devastation Is there a need to seek technical collaboration with other countries or will it be better to go indigenous route only How do we tackle the widening demand supply gap during the interim And finally is there a case for a review for the existing decision loop energy management system An attempt has been made in this book to address these issues It is also expected that the concept advocated in this book for achieving energy security for India by 2030 will initiate a wider debate on the subject

**Energy Conversion** D. Yogi Goswami, Frank Kreith, 2007-07-06 Discussing methods for maximizing available energy Energy Conversion surveys the latest advances in energy conversion from a wide variety of currently available energy sources The book describes energy sources such as fossil fuels biomass including refuse derived biomass fuels nuclear solar radiation wind geothermal and ocean then provides the terminology and units used for each energy resource and their equivalence It includes an overview of the steam power cycle gas turbines internal combustion engines hydraulic turbines Stirling engines advanced fossil fuel power systems and combined cycle power plants It outlines the development current use and future of nuclear fission The book also gives a comprehensive description of the direct energy conversion methods including Photovoltaics Fuel Cells Thermoelectric conversion Thermionics and MHD It briefly reviews the physics of PV electrical generation discusses the PV system design process presents several PV system examples summarizes the latest developments in crystalline silicon PV and explores some of the present challenges facing the large scale deployment of PV energy sources The book discusses five energy storage categories electrical electromechanical mechanical direct thermal and thermochemical and the storage media that can store and deliver energy With contributions from researchers at the top of their fields and on the cutting edge of technologies the book provides comprehensive coverage of end use efficiency of green technology It includes in depth

discussions not only of better efficient energy management in buildings and industry but also of how to plan and design for efficient use and management from the ground up

*World Nuclear Energy* Ian Smart,1982  
*Fukushima and Beyond* Dr Christopher Hubbard,2014-09-28 The catalyst for this study was the Fukushima Daiichi major nuclear accident of 11 March 2011 In this event a severe earthquake and15 metre tsunami caused serious damage and equipment failures at Japan s Fukushima 1 Nuclear Power Plant which were judged by the International Atomic Energy Agency to be equally as serious as the Soviet Chernobyl nuclear disaster of 1986 Against a background of nuclear hesitancy and reassessment the prospect of including or excluding nuclear power in a low carbon twenty first century world is now increasingly critical It is in this emerging scenario and context that this book presents a full suite of historical contemporary and projected data Its use of complementary and comparative country based case studies provides ample opportunity for developing strongly illustrative analysis of policy effectiveness in diverse polities and markets In this way it combines clear comprehensive and rigorously science based evidence analysis and interpretation of data all leading to conclusions and policy recommendations Furthermore it builds an understanding of the complexities and many challenges posed by the nuclear power option

**Restoring U.S. Leadership in Nuclear Energy** The CSIS Commission on Nuclear Energy Policy in the United States,2013-07-03 America s nuclear energy industry is in decline Low natural gas prices financing hurdles failure to find a permanent repository for high level nuclear waste reactions to the Fukushima accident in Japan and other factors are hastening the day when existing U S reactors become uneconomic The decline of the U S nuclear energy industry could be much more rapid than policy makers and stakeholders anticipate China India Russia and others plan on adding nuclear technology to their mix furthering the spread of nuclear materials around the globe U S companies must meet a significant share of this demand for nuclear technology but U S firms are currently at a competitive disadvantage due to restrictive and otherwise unsupportive export policies Without a strong commercial presence in new markets America s ability to influence nonproliferation policies and nuclear safety behaviors worldwide is bound to diminish The United States cannot afford to become irrelevant in a new nuclear age

State of the World ,1984

Nuclear Power in Stagnation

David Toke, Geoffrey Chun-Fung Chen, Antony Froggatt, Richard Connolly, 2021-03-08 This book studies the extent to which nuclear safety issues have contributed towards the stagnation of nuclear power development around the world and accounts for differences in safety regulations in different countries In order to understand why nuclear development has not met widespread expectations this book focusses on six key countries with active nuclear power programmes the USA China France South Korea the UK and Russia The authors integrate cultural theory and theory of regulation and examine the links between pressures of cultural bias on regulatory outcomes and political pressures which have led to increased safety requirements and subsequent economic costs They discover that although nuclear safety is an important upward driver of costs in the nuclear power industry this is influenced by the inherent need to control potentially dangerous reactions rather than stricter nuclear safety standards The findings reveal that differences in the strictness of nuclear safety regulations between different countries can be understood by understanding differences in cultural contexts and the changes in this over time This book will be of great interest to students scholars and policymakers working on energy policy and regulation environmental politics and policy and environment and sustainability more generally **World Nuclear Energy Paths**
