Ruiz-Navarro,Daniel Boullosa,Dennis-Peter Born ,Marina Gil Calvo,2025-12-08 Swimming cycling and track and field are some of the most watched sports in today s Olympic Games with a broad variety of races lasting from a few seconds to several hours In this sense sprint and endurance events share the same approach to scientific analysis mainly from a physiological and biomechanical perspective albeit with different determinants For instance from a metabolic standpoint both sprint and endurance performance are influenced by aerobic and anaerobic pathways However sprint performance relies more on the rapid acquisition of energy through anaerobic pathways Despite similarities in the duration and intensity of events the training regimens of swimmers cyclists and track field athletes are generally quite different As such swimmers typically apply over distance training while track field athletes typically focus on under distance regimes Therefore there may be lessons for both sports to learn from each other There is evidence of the importance of different factors such as the anaerobic pathway development or strength related variables in swimming cycling and track field sprint performance however a lack of knowledge persists regarding the optimal way to maximize them In this regard emerging evidence suggests the relevance of short efforts to performance development Likewise technological advances now allow testing to be extrapolated from dryland conditions to water In particular the development of portable robotic resistance devices allows testing of the load velocity profile during either swimming or running Despite these recent advances there is still a wide range of issues that need to be addressed such as factors that determine sprint performance and strategies employed to maximize them specific methodologies that should be incorporated into sprinters monitoring and that allow to maximize the information obtained in a valid reliable and sensitive way acute protocols e g post activation performance enhancement that help to maximize the individual s potential In summary any aspect that may help in the development of athletes in their pursuit for better sprint performance In this Research Topic we seek to gather information on the determinants of sprint performance in swimming cycling and track field to develop faster athletes This reflection should be carried out from a scientific and or practical view The manuscript should focus on the generation of knowledge original work case study brief report etc that is practically applicable to training and competition routines Moreover state of the art updates and summaries i e reviews as well as lessons learned from other sports e g track cycling and ice speed skating are welcome *The New Science of Swimming* James E.
