Visual Programming:

Visual Programming Nan C. Shu, 1988 This pioneering guide shows how to use graphics to program computers train programmers enhance human computer communications and improve productivity Visual Programming is sure to be a welcome title for computer book consumers *Visual Database Systems 3* Stefano Spaccapietra, Ramesh Jain, 1995-09-30 Both the way we look at data through a DBMS and the nature of data we ask a DBMS to manage have drastically evolved over the last decade moving from text to images and to sound to a lesser extent Visual representations are used extensively within new user interfaces Powerful visual approaches are being experimented for data manipulation including the investigation of three dimensional display techniques Similarly sophisticated data visualization techniques are dramatically improving the understanding of the information extracted from a database On the other hand more and more applications use images as basic data or to enhance the quality and richness of data manipulation services Image management has opened a wide area of new research topics in image understanding and analysis The IFIP 2.6 Working Group on Databases strongly believes that a significant mutual enrichment is possible by confronting ideas concepts and techniques supporting the work of researcher and practitioners in the two areas of visual interfaces to DBMS and DBMS management of visual data For this reason IFIP 2.6 has launched a series of conferences on Visual Database Systems The first one has been held in Tokyo 1989 VDB 2 was held in Budapest 1991 This conference is the third in the series As the preceding editions the conference addresses researchers and practitioners active or interested in user interfaces human computer communication knowledge representation and management image processing and understanding multimedia database techniques and computer vision *Advances in Visual Computing* George Bebis, Richard Boyle, Bahram Parvin, Darko Koracin, Song Wang, Kim Kyungnam, Bedrich Benes, Kenneth Moreland, Christoph Borst, Stephen DiVerdi, Chiang Yi-Jen, Jiang Ming, 2011-09-24 The two volume set LNCS 6938 and LNCS 6939 constitutes the refereed proceedings of the 7th International Symposium on Visual Computing ISVC 2011 held in Las Vegas NV USA in September 2011 The 68 revised full papers and 46 poster papers presented together with 30 papers in the special tracks were carefully reviewed and selected from more than 240 submissions The papers of part I LNCS 6938 are organized in computational bioimaging computer graphics motion and tracking segmentation visualization mapping modeling and surface reconstruction biomedical imaging computer graphics interactive visualization in novel and heterogeneous display environments object detection and recognition Part II LNCS 6939 comprises topics such as immersive visualization applications object detection and recognition virtual reality and best practices in teaching visual computing [Visual Languages](#) Shi-Kuo Chang, 2012-12-06 This book is intended as both an introduction to the state of the art in visual languages as well as an exposition of the frontiers of research in advanced visual languages It is for computer scientists computer engineers information scientists application programmers and technical managers responsible for software development projects who are interested in the methodology

and manifold applications of visual languages and visual programming The contents of this book are drawn from invited papers as well as selected papers from two workshops the 1985 IEEE Workshop on Languages for Automation Cognitive Aspects in Information Processing which was held in Mallorca Spain June 28 30 1985 and the 1984 IEEE Workshop on Visual Languages which was held in Hiroshima Japan December 7 9 1984 Panos Ligomenides and I organized the technical program of LFA 85 and Tadao Ichikawa and I organized the technical program of VL 84 Both workshops have now become successful annual events in their own right The intersecting area of visual languages and visual programming especially has become a fascinating new research area It is hoped that this book will focus the reader's attention on some of the interesting research issues as well as the potential for future applications After reading this book the reader will undoubtedly get an impression that visual languages and the concept of generalized icons can be studied fruitfully from many different perspectives including computer graphics formal language theory educational methodology cognitive psychology and visual design
