

Static Analysis

- Detects defects in code before executing the application.
- Ensures fewer defects during unit testing.
- Finds syntax errors, security vulnerabilities, coding standard violations, and logic errors.

- Can analyze the entire codebase, including unused code, since it doesn't require code execution.
- More cost-effective in the long run because it catches issues early, reducing the cost of fixing bugs later in the development cycle.
- Helps ensure compliance with coding standards like MISRA, CERT, and others to satisfy safety-critical regulations.

Dynamic Analysis

- Requires code execution to detect defects in the application.
- Ensures fewer defects during integration and system testing.
- Finds runtime issues like memory leaks, performance bottlenecks, and elusive vulnerabilities and defects.

- Only analyzes the code that is executed during the tests, potentially missing unexecuted portions.
- May be time-consuming and costly due to the need for real-time execution and more extensive testing environments.
- Required for specific runtime behavior verifications defined in functional safety standards like DO-178C, ISO 26262, and others.

Comparative Statics Analysis in Economics Kevin M. Currier, 2000 As an empirical science economics employs theoretical models to describe economic phenomena and processes These models are then used to generate testable propositions Comparative statics analysis facilitates the derivation of such propositions This book is a self contained introduction to comparative statics analysis which is appropriate for a first year PhD course in mathematics for economists The demands that modern economic analysis places upon the student renders an incremental approach to learning essential This permits students intuition to develop as mathematical tools are employed in problem solving In this book students learn comparative statics by doing comparative statics in progressively more sophisticated models Repeated application of the basic technique allows the student to gain competence in comparative statics analysis with minimal distraction
