Richard Stevens, Stephen A. Rago, 2013-06-10 For more than twenty years serious C programmers have relied on one book for practical in depth knowledge of the programming interfaces that drive the UNIX and Linux kernels W Richard Stevens *Advanced Programming in the UNIX Environment* Now once again Rich s colleague Steve Rago has thoroughly updated this classic work The new third edition supports today s leading platforms reflects new technical advances and best practices and aligns with Version 4 of the Single UNIX Specification Steve carefully retains the spirit and approach that have made this book so valuable Building on Rich s pioneering work he begins with files directories and processes carefully laying the groundwork for more advanced

techniques such as signal handling and terminal I/O. He also thoroughly covers threads and multithreaded programming and socket based IPC. This edition covers more than seventy new interfaces including POSIX asynchronous I/O, spin locks, barriers and POSIX semaphores. Most obsolete interfaces have been removed except for a few that are ubiquitous. Nearly all examples have been tested on four modern platforms: Solaris 10, Mac OS X version 10.6.8, Darwin 10.8.0, FreeBSD 8.0 and Ubuntu version 12.04 based on Linux 3.2. As in previous editions you'll learn through examples including more than ten thousand lines of downloadable ISO C source code. More than four hundred system calls and functions are demonstrated with concise complete programs that clearly illustrate their usage arguments and return values. To tie together what you've learned the book presents several chapter length case studies each reflecting contemporary environments. Advanced Programming in the UNIX Environment has helped generations of programmers write code with exceptional power performance and reliability. Now updated for today's systems this third edition will be even more valuable.

Programmer's Guide - Streams, 1992. A full explanation of the STREAMS I/O facilities this guide details how to use those facilities for writing UNIX System V kernel modules and device drivers. STREAMS is a general flexible facility for the development of input/output services in UNIX System V. This book is a comprehensive guide to STREAMS for network and system programmers including the latest information on STREAMS programming interfaces, STREAMS in a multiprocessing environment, STREAMS drivers and multiplexors, STREAMS debugging and utilities. *UNIX System V, Release 4*, 1992. **Paperbound Books in Print**, 1991.

Computerworld, 1991-01-28. For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award winning Web site Computerworld.com, twice monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network.

TCP/IP and Related Protocols by Les D. Black, 1995. This new edition clearly explains all facets of TCP/IP and the many protocols that operate within these two standards. It's written for anyone either using or managing data communications systems and networks. Updated coverage includes resource records (RR) for DNS, discovery services, messaging in the Internet and more.

Network Programming Interface, 1992. Covers the development tools needed to create applications based on a client/server model of computing. The book describes the programming interfaces to SVR4.2 networking facilities such as Transport Library Interface (TLI), Sockets, Remote Procedure Call (RPC), Connection Server and REXEC. *Dataquest*, 1993.

UNIX System V Network Programming by Stephen A. Rago, 1993. Steve Rago offers valuable insights into the kernel level features of SVR4 not covered elsewhere. I think readers will especially appreciate the coverage of STREAMS, TLI and SLIP. W. Richard Stevens, author of *UNIX Network Programming: Advanced Programming in the UNIX Environment*, *TCP/IP Illustrated Volume 1* and *TCP/IP Illustrated Volume 2*. Finally with *UNIX System V Network Programming* an authoritative reference is available for programmers and system architects interested in building networked and distributed applications for UNIX System V. Even if you currently use a different version of the UNIX system such as the latest release of 4.3BSD or SunOS this

book is valuable to you because it is centered around UNIX System V Release 4 the version of the UNIX system that unified many of the divergent UNIX implementations For those professionals new to networking and UNIX system programming two introductory chapters are provided The author then presents the programming interfaces most important to building communication software in System V including STREAMS the Transport Layer Interface library Sockets and Remote Procedure Calls So that your designs are not limited to user level the author also explains how to write kernel level communication software including STREAMS drivers modules and multiplexors Many examples are provided including an Ethernet driver and a transport level multiplexing driver In the final chapter the author brings the material from previous chapters together presenting the design of a SLIP communication package 0201563185B04062001 **UNIX System V System Calls** Baird Peterson,1992
