**Principles of Memory** Aimée M. Surprenant, Ian Neath, 2013-03-07 In over 100 years of scientific research on human memory and nearly 50 years after the so called cognitive revolution we have nothing that really constitutes a widely accepted and frequently cited law of memory and perhaps only one generally accepted principle The purpose of this monograph is to begin to rectify this situation by proposing 7 principles of human memory that apply to all memory These principles are qualitative statements of empirical regularities that can serve as intermediary explanations and which follow from viewing memory as a function They apply to all types of information to all memory systems and to all time scales The principles highlight important gaps in our knowledge challenge existing organizational views of memory and suggest important new lines of research This volume is intended for people in the field of memory from advanced undergraduates to seasoned researchers although it will be of interest to those who would like a comprehensive overview of the fundamental regularities in cognitive functioning

**Developing and Validating Test Items** Thomas M. Haladyna, Michael C. Rodriguez, 2013-07-18 Since test items are the building blocks of any test learning how to develop and validate test items has always been critical to the teaching learning process As they grow in importance and use testing programs increasingly supplement the use of selected response multiple choice items with constructed response formats This trend is expected to continue As a result a new item writing book is needed one that provides comprehensive coverage of both types of items and of the validity theory underlying them This book is an outgrowth of the author s previous book *Developing and Validating Multiple Choice Test Items* 3e Haladyna 2004 That book achieved distinction as the leading source of guidance on creating and validating selected response test items Like its predecessor the content of this new book is based on both an extensive review of the literature and on its author s long experience in the testing field It is very timely in this era of burgeoning testing programs especially when these items are delivered in a computer based environment Key features include Comprehensive and Flexible No other book so thoroughly covers the field of test item development and its various applications Focus on Validity Validity the most important consideration in testing is stressed throughout and is based on the Standards for Educational and Psychological Testing currently under revision by AERA APA and NCME Illustrative Examples The book presents various selected and constructed response formats and uses many examples to illustrate correct and incorrect ways of writing items Strategies for training item writers and developing large numbers of items using algorithms and other item generating methods are also presented Based on Theory and Research A comprehensive review and synthesis of existing research runs throughout the book and complements the expertise of its authors

**Memory Editing Mechanisms** Susan E. Gathercole, Martin A. Conway, 2020-10-28 This special issue of Memory is devoted to an investigation of those mechanisms by which memory is edited for inaccuracies and inconsistencies In the past 20 years false memories have been investigated from a variety of different angles Substantial evidence indicates that false memories can be created in a number of different situations including word learning sentence and story memory eyewitness memory memory for faces and memory for naturalistic scenes In each of these cases it has been found that memory is subject to a range of distortions But there has also been an increasing recognition that this is only half the story For although memory is subject to distortion there are also quality control mechanisms that are utilized that allow our memories to be relied on as reasonably accurate under most circumstances These mechanisms include recollection rejection distinctiveness and source memory The focus of this special issue then is on the interplay between
