Unsolved Problems In Stellar Evolution:

Unsolved Problems in Stellar Evolution Space Telescope Science Institute (U.S.),2000-04-13 The most comprehensive and up to date survey available on stellar structure and evolution with a special emphasis on currently unsolved problems

Unsolved Problems in Stellar Evolution Mario Livio,1999 **Unsolved Problems in Stellar Evolution** Mario Livio,Space Telescope Science Institute,1998 **Unsolved Problems in Stellar Evolution** Space telescope science institute,1988* *Unsolved Problems in Astrophysics* John N. Bahcall,Jeremiah P. Ostriker,1997-02-06 The field of astrophysics is in the midst of a technological renaissance The emphasis of this collection of essays composed by a stellar group of astronomers and astrophysicists is on the current state of our knowledge as a preparation for future unraveling of more mysteries of the universe which appear most amenable to solution Aspiring atrophysicists will be enthralled

Unsolved Problems in Astrophysics John N. Bahcall,J. P. Ostriker,1997 Essays discuss the present state of knowledge following recent discoveries about the structure of the universe galaxies quasars neutrinos and other topics and suggest areas for future research **Unsolved Problems in Stellar Physics** Richard J. Stancliffe,2007 This volume is comprised of a series of papers dealing with some of the current unsolved problems in the field of stellar physics It is also a celebration of the many contributions that Prof Douglas Gough has made to this subject Topics discussed include stars interiors stars evolution asteroseismology helioseismology and fluid dynamics Modern Problems of Stellar Evolution D. S. Wiebe,1998

Advances in Stellar Evolution Robert T. Rood,Alvio Renzini,1997-06-26 An understanding of how stars evolve is central to astrophysics The basic theory is well established However the subject has undergone a renaissance in recent years as powerful computers have become widely available and allowed complex evolutionary models to be developed and compared in great detail with observations from the latest instruments This timely volume presents the review articles from an international meeting in Elba Italy where experts gathered to review how our understanding of stellar evolution has advanced Topics covered include fundamentals of stellar evolution star clusters variable stars asymptotic giant branch stars degenerate stars the evolution of binary stars and chemical and galactic evolution Throughout theory and observation are closely compared The book also emphasises the critical role stars have on our understanding of how galaxies evolve In this book we are provided with both the fundamentals and the latest research In this way it will provide an invaluable supplement for graduate students and a timely review for researchers Astronomical Applications of Astrometry M. A. C. Perryman,2009 The Hipparcos satellite developed and launched by the European Space Agency ESA in 1989 was the first space mission dedicated to astrometry the accurate measurement of positions distances and proper motions of stars Amongst the key achievements of its measurements are refining the cosmic distance scale characterizing the large scale kinematic motions in the Solar neighborhood providing precise luminosities for stellar modelling and confirming Einstein s prediction of the effect of gravity on starlight This authoritative account of the Hipparcos contributions over the last decade is an

outstanding reference for astronomers astrophysicists and cosmologists It reviews the applications of the data in different areas describing the subject and the state of the art before Hipparcos and summarizing all major contributions to the topic made by Hipparcos It contains a detailed overview of the Hipparcos and Tycho Catalogues their annexes and their updates Each chapter ends with comprehensive references to relevant literature

Star Clusters B.W. Carney, W.E. Harris, 2006-04-18 Star clusters are at the heart of astronomy being key objects for our understanding of stellar evolution and galactic structure Observations with the Hubble Space Telescope and other modern equipment have revealed fascinating new facts about these galactic building blocks This book provides two comprehensive and up to date pedagogically designed reviews on star clusters by two well known experts in the field Bruce Carney presents our current knowledge of the relative and absolute ages of globular clusters and the chemical history of our Galaxy Bill Harris addresses globular clusters in external galaxies and their use as tracers of galaxy formation and cosmic distance indicators The book is written for graduate students as well as professionals in astronomy and astrophysics

Unsolved Problems of the Milky Way Leo Blitz, Peter Teuben, 2013-11-11 Although the Milky Way is the most studied and best understood galactic system there are many fundamental questions about our Galaxy that remain unanswered This book concentrates on those questions which have the widest applicability in all of astrophysics and for which answers are most likely to be forthcoming in the next few years Is the Milky Way a barred spiral and if so what are its properties Is the disk of the Milky Way axisymmetric and what does the answer tell us about its dynamical history Is there a black hole at the center of the Galaxy How far does the Galaxy extend How much dark matter is there in the Milky Way system And more

Post-AGB Objects as a Phase of Stellar Evolution R. Szczerba, S.K. Górný, 2001-08-31 The term proto planetary nebulae PPNe in the context of the late stages of stellar evolution was created just over 20 years ago to express the belief that in the near future these objects will become planetary nebulae PNe The first proto planetary nebulae also called post Asymptotic Giant Branch or post AGB objects were discovered in the mid 1970s in the course of the Air Force Sky Survey Investigation of this phase of stellar evolution developed very rapidly in the 1980s after the IRAS mission when it became clear that proto planetary nebulae emit a significant part of their energy in the mid and far infrared A new impetus in this field began in the 1990s with high spatial resolution imaging in mid infrared and optical wavelengths Evidence has been found that proto planetary nebulae at least their central parts are quite asymmetric while shells of AGB stars display spherical shapes The most intriguing challenge now is to understand which physical processes are dominant during formation and evolution of proto planetary nebulae Is it magnetic field evolution in binary systems planets axisymmetric superwind mass loss and its further shaping by fast wind collimated jets interacting with a spherically symmetric AGB remnant or maybe an interplay between these different processes Another challenge is to explain why the mass loss process

near the end of the AGB evolution is modulated on timescales of a few hundred years The model presented during this workshop seems to be very promising in this respect

Star Clusters (IAU S266) International Astronomical Union. Symposium, 2010-02-04 Star clusters are important to many areas of astronomy and as the basic building blocks of galaxies they can be used as key diagnostic tools within a wide range of disciplines in astrophysics Star cluster populations are powerful tracers of the formation assembly and evolutionary history of their parent galaxies Although their importance has been recognised for decades only in recent years has this area seen a major investment in time and effort IAU Symposium 266 consolidates the expertise of leading researchers from a variety of topical subfields in astrophysics to provide a comprehensive presentation of cutting edge developments in theory observations and simulations of star clusters and star cluster systems across a range of sizes and epochs This volume gives an account of this forefront research answering fundamental questions that will improve our understanding of numerous related issues and show how this field will take its next major step forward
