World Potato Congress World Potato Congress,2004 Advances in Research on Potato Production Shashank Shekhar Solankey,2025-06-11 Potato Solanum tuberosum L is the world s third most important food crop and the fourth most important food crop in India Potatoes are nutritionally rich fat free gluten free and high in dietary fibre They are also a good source of vitamin C vitamin B6 phenols iron potassium phosphorus magnesium and protein as compared to cereals They are more energy packed than any other popular vegetables and have the ability to combat hidden hunger which is a major global health issue The potato is also considered the king of vegetables due to its versatile uses and is an important staple food worldwide According to the

FAOSTAT database 2023 global potato production in 2022 was 375 million tonnes with the top producers being China 95.5 million tonnes and India 56 million tonnes. The United Nations declared 2008 the International Year of the Potato (IYP) to increase awareness of the relationship that exists between poverty, food security, malnutrition and the potential contribution of the potato in defeating hunger. Moreover, this magical crop can generate a higher yield compared to the other crops; hence it is one of the most notable crops to eliminate hunger and poverty. Therefore, sustainable potato production is important for food security and social welfare in future climate change scenarios. It is important to inform that potatoes have a shallow root system and are highly sensitive to environmental conditions and climate change. It is projected that potato yield may decrease up to 32 per cent by 2050 due to increasing temperatures and drought conditions. Thus, future potato breeding programmes should focus on enhancing abiotic and biotic stress tolerance through the utilization of the natural germplasm conserved in different gene banks along with climate-friendly agronomical practices. Moreover, potato breeding should benefit from the effectiveness and ease of molecular techniques such as marker-assisted selection, genome-wide association studies, functional genomics and transgenics. The development of new potato varieties can also be achieved via genetic engineering and genome editing. Disease-free potato seed production requires the integration of tissue culture methods followed by the production of mini tubers under an aeroponic system. As it is a staple food for millions and demand for potatoes will increase in the future, which makes this crop suitable for future research. Hence, the present book is formulated for professionals, researchers and post-graduate students who are working with advanced production, breeding and post-harvest technologies on potato crop, specially in Indian perspective.

Pollution Gloria Davies, Jeremy Goldkorn, Luigi Tomba, 2016-09-19. Environmental pollution poses serious challenges for China, including to its economy as well as public health. The China Story Yearbook 2015: Pollution looks at how China's Communist Party state addresses these problems and how Chinese citizens have coped with and expressed their concerns about living with chronic, worsening pollution. This Yearbook also explores the broader ramifications of pollution in the People's Republic for culture, society, law and social activism, as well as the Internet, language, thought and approaches to history. It looks at how it affects economic and political developments, urban change and China's regional and global posture. The Chinese Communist Party, led by Chairman of Everything Xi Jinping, meanwhile has subjected mainland society to increasingly repressive control in its new determination to rid the country of Western spiritual pollutants while achieving cultural purification through propaganda and ideological work. To adulterate, contaminate, spoil or violate these are among the metaphorical and literal connotations of pollution expressed in this Yearbook via the character *ran*, which forms part of the word for pollution in Chinese, *wuran*. As the world increasingly relies on economic ties with China, the complexities of China's one-party system and the Chinese government's attitudes towards pollution are of increasing global significance.
