Properties of Liquids and Solids Jennifer Lawson, 2001 The 11 lessons in this module introduce students to the properties of liquids and their interactions with other forms of matter. Students explore solutions, suspensions, absorption, and flotation and are given an opportunity to design, construct, and test a floating object. Also included are materials lists, activity descriptions, questioning techniques, activity centre and extension ideas, assessment suggestions, activity sheets, and visuals. The module offers a detailed introduction to the Hands On Science program, guiding principles, implementation guidelines, an overview of the skills that young students use and develop during scientific inquiry, a list of children's books and websites related to the science topics introduced, and a classroom assessment plan with record-keeping templates.

Virginia Woolf and the Discourse of Science Holly Henry, 2003-02-27 Henry investigates how advances in astronomy in the early twentieth century had a shaping effect on Woolf's literature and aesthetics, as well as on the work of modernist British writers including Vita Sackville West, H. G. Wells, and T. S. Eliot. In re-evaluating the cultural context out of which Modernism emerged, Henry contends that Woolf, through her own fascination with astronomy, formulated a global vision that helped shape her fiction and her pacifist politics. Henry's study includes examinations of unpublished scientific and literary archival material and sheds new light on Woolf's texts.
