[Integrable Structures of Exactly Solvable Two-Dimensional Models of Quantum Field Theory](#) S. Pakuliak, G. von Gehlen, 2012-12-06 Integrable quantum field theories and integrable lattice models have been studied for several decades but during the last few years new ideas have emerged that have considerably changed the topic The first group of papers published here is concerned with integrable structures of quantum lattice models related to quantum group symmetries The second group deals with the description of integrable structures in two dimensional quantum field theories especially boundary problems thermodynamic Bethe ansatz and form factor problems Finally a major group of papers is concerned with the purely mathematical framework that underlies the physically motivated research on quantum integrable models including elliptic deformations of groups representation theory of non compact quantum groups and quantization of moduli spaces

Ferrell, MARYLAND UNIV COLLEGE PARK CENTER FOR THEORETICAL PHYSICS., 1972 The Schultz Mattis Lieb Fermion formulation of the two dimensional Ising model is simplified by means of long wavelength approximations which become exact in the critical region The resulting continuum theory has a Hamiltonian density which is shown to be identical to within a perfect derivative to that of free spinless particles satisfying the one dimensional Dirac equation Filling the negative energy single particle states of momentum  $q$  and mass  $k$  gives an integral over the single particle energies  $q^2$   $k^2$  to the  $1/2$  power Because  $k$  varies linearly with the temperature differentiating twice gives Onsager's logarithmic singularity in the specific heat Author
