READ by PICTURE. Simple Stories Helen Winter, 2019-12-07 We offer the easiest way to make reading books with children a pleasure even for those children who listen to reading reluctantly With the usual type of reading a child is a passive listener while with reading by picture he or she becomes an active participant Even if children can already read they are happy to read texts where some of the words are replaced by pictures and perceive it as a bonus or a prize It is more important to receive such bonuses for children who are just starting to read or for whom reading still requires effort A small child can only voice words represented by pictures This reading not only makes kids a full participant in the process but also teaches them to reconcile the words of the picture with other words in the sentence Older children may try to read words from a vocabulary list that appears before the text A child who has begun to read will be able to enjoy reading the entire text If you are reading to your little one please read slowly Let your child think about the sentence find the right word and enjoy the reading process Some words in this book are changed to pictures Each story has a pictured vocabulary list at the beginning Includes 7 simple stories understandable and relatable for kids Great book for non English speaking children to learn and remember new words in a fun game based reading activity

Modeling HIV Transmission and AIDS in the United States Herbert W. Hethcote, James W. Van Ark, 2013-03-09 The disease that came to be called acquired immunodeficiency syndrome AIDS was first identified in the summer of 1981 By that time nearly 100 000 persons in the United States may have been infected with human immunodeficiency virus HIV By the time the routes of transmission were clearly identified and HIV was established as the cause of AIDS in 1983 over 300 000 people may have been infected That number has continued to increase with approximately 1 000 000 Americans believed to be infected in 1991 The epidemic is of great public health concern because HIV is infectious causes severe morbidity and death in most if not all of those infected and often occurs in relatively young persons In addition the cost of medical care for a person with HIV disease is high and the medical care needs of HIV infected persons place a severe burden on the medical care systems in many areas Understanding and controlling the HIV epidemic is a particularly difficult challenge The long and variable period between HIV infection and clinical disease makes it difficult both to forecast the future magnitude of the epidemic which is important for health care planning and to estimate the number infected in the last several years which is important for monitoring the current status of the epidemic
