## **Surface Architecture:**

*Surface Architecture* David Leatherbarrow, Mohsen Mostafavi, 2005-02-11 A study of the building surface architecture as primary instrument of identity and engagement with its surroundings Visually many contemporary buildings either reflect their systems of production or recollect earlier styles and motifs This division between production and representation is in some ways an extension of that between modernity and tradition In this book David Leatherbarrow and Mohsen Mostafavi explore ways that design can take advantage of production methods such that architecture is neither independent of nor dominated by technology Leatherbarrow and Mostafavi begin with the theoretical and practical isolation of the building surface as the subject of architectural design The autonomy of the surface the free facade presumes a distinction between the structural and nonstructural elements of the building between the frame and the cladding Once the skin of the building became independent of its structure it could just as well hang like a curtain or like clothing The focus of the relationship between structure and skin is the architectural surface In tracing the handling of this surface the authors examine both contemporary buildings and those of the recent past Architects discussed include Albert Kahn Ludwig Mies van der Rohe Alison and Peter Smithson Alejandro de la Sota Robert Venturi Jacques Herzog and Pierre de Meuron The properties of a building's surface whether it is made of concrete metal glass or other materials are not merely superficial they construct the spatial effects by which architecture communicates Through its surfaces a building declares both its autonomy and its participation in its surroundings

[Designing Kinetics for Architectural Facades](#) Jules Moloney, 2011-06-14 Architectural facades now have the potential to be literally kinetic through automated sunscreens and a range of animated surfaces This book explores the aesthetic potential of these new types of moving facades Critique of theory and practice in architecture is combined here with ideas from kinetic art of the 1960 s From this background the basic principles of kinetics are defined and are used to

generate experimental computer animations By classifying the animations a theory of kinetic form called state change is developed This design research provides a unique and timely resource for those interested in the capacity of kinetics to enliven the public face of architecture Extra material including animations can be seen at [www.kineticarch.net/statechange](http://www.kineticarch.net/statechange)
