Performance Tools and Applications to Networked Systems Maria Carla Calzarossa, Erol Gelenbe, 2004-04-05 This book presents revised versions of tutorial lectures given at the IEEE CS Symposium on modeling analysis and simulation of computer and telecommunication systems held in Orlando FL USA in October 2003 The lectures are grouped into three parts on performance and QoS of modern wired and wireless networks current advances in performance modeling and simulation and other specific applications of these methodologies This tutorial book is targeted to both practitioners and researchers The practitioner will

benefit from numerous pointers to performance and QoS issues the pedagogical style and plenty of references will be of great use in solving practical problems The researcher and advanced student are offered a representative set of topics not only for their research value but also for their novelty and use in identifying areas of active research

Web Content

Delivery Xueyan Tang, Jianliang Xu, Samuel T. Chanson, 2006-01-17 The concept of content delivery also known as content distribution is becoming increasingly important due to rapidly growing demands for efficient distribution and fast access of information in the Internet Content delivery is very broad and comprehensive in that the contents for distribution cover a wide range of types with significantly different characteristics and performance concerns including HTML documents images multimedia streams database tables and dynamically generated contents Moreover to facilitate ubiquitous information access the network architectures and hardware devices also vary widely They range from broadband wired fixed networks to bandwidth constrained wireless mobile networks and from powerful workstations PCs to personal digital assistants PDAs and cellular phones with limited processing and display capabilities All these levels of diversity are introducing numerous challenges on content delivery technologies It is desirable to deliver contents in their best quality based on the nature of the contents network connections and client devices This book aims at providing a snapshot of the state of the art research and development activities on web content delivery and laying the foundations for future web applications The book focuses on four main areas 1 web content delivery 2 dynamic web content 3 streaming media delivery and 4 ubiquitous web access It consists of 17 chapters written by leading experts in the field The book is designed for a professional audience including academic researchers and industrial practitioners who are interested in the most recent research and development activities on web content delivery

Web-based Support Systems

JingTao Yao, 2010-03-02 Web based Support Systems WSS are an emerging multidisciplinary research area in which one studies the support of human activities with the Web as the common platform medium and interface The Internet affects every aspect of modern life Moving support systems to online is an increasing trend in many research domains One of the goals of WSS research is to extend the human physical limitation of information processing in the information age Research on WSS is motivated by the challenges and opportunities arising from the Internet The availability accessibility and exhibility of information as well as the tools to access this information lead to a vast amount of opportunities However there are also many challenges we face For instance we have to deal with more complex tasks as there are increasing demands for quality and productivity WSS research is a natural evolution of the studies on various computerized support systems such as Decision Support Systems DSS Computer Aided Design CAD and Computer Aided Software Engineering CASE The recent advancement of computer and Web technologies make the implementation of more feasible WSS Nowadays it is rare to see a system without some type of Web interaction The research of WSS is classified into four groups WSS for specific domains
