Advanced Web Services Athman Bouguettaya, Quan Z. Sheng, Florian Daniel, 2013-08-13 Web services and Service Oriented Computing SOC have become thriving areas of academic research joint university industry research projects and novel IT products on the market SOC is the computing paradigm that uses Web services as building blocks for the engineering of composite distributed applications out of the reusable application logic encapsulated by Web services Web services could be considered the best known and most standardized technology in use today for distributed computing over the Internet This book is the second installment of a two book collection covering the state of the art of both theoretical and practical aspects of Web services and SOC research and deployments Advanced Web Services specifically focuses on advanced topics of Web services and SOC and covers topics including Web services transactions security and trust Web service management real world case studies and novel perspectives and future directions The editors present foundational topics in the first book of the collection Web Services Foundations Springer 2013 Together both books comprise approximately 1400 pages and are the result of an enormous community effort that involved more than 100 authors comprising the world's leading experts in this field *Managing Web Service Quality: Measuring Outcomes and Effectiveness* Khan, Khaled M., 2008-10-31 This book is for strategic decision makers as it discusses quality issues related to Web services Provided by publisher **Information Control Problems in Manufacturing 2004 (2-volume Set)** Peter Kopacek, Gerard Morel, Carlos Eduardo Pereira, 2005-08-12 Proceedings International Conference on Information Processing L M Patnaik, K R Venugopal, 2007-01-01 The proceedings features several key note addresses in the areas of advanced information processing tools This area has been recognized to be one of the key five technologies poised to shape the modern society in the next decade It aptly focuses on the tools and techniques for the development of Information Systems Emphasis is on pattern recognition and image processing software engineering mobile ad hoc networks security aspects in computer networks signal processing and hardware synthesis optimization techniques data mining and information processing On the Performance of Web Services Zahir Tari, Ann Khoi Anh Phan, Malith Jayasinghe, Vidura Gamini Abhaya, 2011-10-29 Performance of Web Services provides innovative techniques to improve the performance of Web Services as well as QoS Quality of Service requirements This includes QoS performance reliability and security The author presents two levels of Web Services the kernel i.e. the SOAP engine which delivers messages from one point to another through various networks and the server side which processes heavy load requests The primary objective of this book is execution of applications delivered in a timely fashion Case studies and examples are provided throughout this book **Foundations for Efficient Web Service Selection** Qi Yu, Athman Bouguettaya, 2009-09-02 Foundations for Efficient Web Service Selection describes the foundational framework for efficient Web service selection It lays out a theoretical underpinning for the design of models and algorithms for searching and optimizing access to Web services Excerpts from Prof Fabio Casati's foreword

This excellent book looks at the search problem from a broader perspective. Instead of narrowing down on a specific aspect or subproblem of service search, it dissects and analyzes the fundamental problems in search and presents concrete applicable solutions as well as the theoretical foundations behind them. One aspect I found particularly significant in the book is the mind shift it generates from thinking about service modeling for the sake of supporting deployment or invocation to modeling for supporting search. This design for search approach is exactly what we do when we design databases because search is what we worry about in that case and there is no reason why this shouldn't be the case for services if we want services to be searchable with a similar effectiveness.
