Undecidable Basic Papers On Undecidable:

The Undecidable Martin Davis, 2004-01-01 A valuable collection both for original source material as well as historical formulations of current problems The Review of Metaphysics Much more than a mere collection of papers A valuable addition to the literature Mathematics of Computation An anthology of fundamental papers on undecidability and unsolvability by major figures in the field this classic reference is ideally suited as a text for graduate and undergraduate courses in logic philosophy and foundations of mathematics It is also appropriate for self study The text opens with Godel s landmark 1931 paper demonstrating that systems of logic cannot admit proofs of all true assertions of arithmetic Subsequent papers by Godel Church Turing and Post single out the class of recursive functions as computable by finite algorithms Additional papers by Church Turing and Post cover unsolvable problems from the theory of abstract computing machines mathematical logic and algebra and material by Kleene and Post includes initiation of the classification theory of unsolvable problems Supplementary items include corrections emendations and added commentaries by Godel Church and Kleene for this volume s original publication along with a helpful commentary by the editor

The Nature of the Machine and the Collapse of Cybernetics Alcibiades Malapi-Nelson, 2017-07-03 This book is a philosophical exploration of the theoretical causes behind the collapse of classical cybernetics as well as the lesson that this episode can provide to current emergent technologies Alcibiades Malapi Nelson advances the idea that the cybernetic understanding of the nature of a machine entails ontological and epistemological consequences that created both material and theoretical conundrums However he proposes that given our current state of materials research scientific practices and research tools there might be a way for cybernetics to flourish this time The book starts with a historical and theoretical articulation of cybernetics in order to proceed with a philosophical explanation of its collapse emphasizing the work of Alan Turing Ross Ashby and John von Neumann Subsequently Malapi Nelson unveils the common metaphysical signature shared between cybernetics and emergent technologies identifying this signature as

transhumanist in nature Finally avenues of research that may allow these disruptive technologies to circumvent the cybernetic fate are indicated It is proposed that emerging technologies ultimately entail an affirmation of humanity

Recursive Functions and Metamathematics Roman Murawski,2013-03-14 Recursive Functions and Metamathematics deals with problems of the completeness and decidability of theories using as its main tool the theory of recursive functions This theory is first introduced and discussed Then Gödel's incompleteness theorems are presented together with generalizations strengthenings and the decidability theory The book also considers the historical and philosophical context of these issues and their philosophical and methodological consequences Recent results and trends have been included such as undecidable sentences of mathematical content reverse mathematics All the main results are presented in detail The book is self contained and presupposes only some knowledge of elementary mathematical logic There is an extensive bibliography Readership Scholars and advanced students of logic mathematics philosophy of science

Cellular Automata And Complexity Stephen Wolfram,2018-03-08 Are mathematical equations the best way to model nature For many years it had been assumed that they were But in the early 1980s Stephen Wolfram made the radical proposal that one should instead build models that are based directly on simple computer programs Wolfram made a detailed study of a class of such models known as cellular automata and discovered a remarkable fact that even when the underlying rules are very simple the behaviour they produce can be highly complex and can mimic many features of what we see in nature And based on this result Wolfram began a program of research to develop what he called A Science of Complexity The results of Wolfram's work found many applications from the so called Wolfram Classification central to fields such as artificial life to new ideas about cryptography and fluid dynamics This book is a collection of Wolfram's original papers on cellular automata and complexity Some of these papers are widely known in the scientific community others have never been published before Together the papers provide a highly readable account of what has become a major new field of science with important implications for physics biology economics computer science and many other areas

In the Scope of Logic, Methodology and Philosophy of Science Peter Gärdenfors,Jan Wolenski,K. Copyright, Data and Creativity in the Digital Age Julian Warner,2020-09-01 The Supreme Court of the United States in *Feist v Rural* 1991 required that databases must have a

minimal degree of creativity for copyright The judgment was highly significant and the subsequent period is understood as the post Feist era It has been globally influential However the decision is extremely complex and remains unsatisfactorily interpreted In particular it has been impossible to illuminate the creativity requirement The book gives an account of the decision s conceptual structure focusing on its full delineation of the opposite to creativity In a radical and unprecedented innovation it is correlated with an automatic computational process Creativity itself is understood as non computational or directly human activity concerned with meaning Determining the presence of creativity is reduced to a four stage test This work then has acute practical current relevance to property in data in the digital age it will also be of theoretical interest to and is aimed at researchers in practitioners and students of intellectual property worldwide
