## **Teaching Science Through Technology Part 2:**

*Teaching Science and Technology in the Early Years (3-7)* Dan Davies, Alan Howe, Christopher Collier, Rebecca Digby, Sarah Earle, Kendra McMahon, 2014-04-24 Teaching Science and Technology in the Early Years 3 7 celebrates young children's amazing capabilities as scientists, designers, and technologists. Research-based, yet practical and accessible, it demonstrates how scientific designing and making activities are natural to young children and have the potential for contributing to all aspects of their learning. By identifying the scientific and design-related concepts, skills, and activities being developed, the book enables the reader to make more focused diagnostic observations of young children and plan for how they can help move them forward in their learning. This second edition has been thoroughly updated and features six new chapters providing practical advice and examples for enhancing scientific and technological learning through thematic approaches, a new chapter focusing on the outdoor learning environment and how this can support science and technology, new case studies of successful early years practice alongside examples of practical planning for learning, and advice on documenting children's learning stories. Guidance on the role of talk, narrative, documentation, and planning in relation to early years science and technology. Based on the latest research and the first-hand experience, this practical and accessible book is essential reading for early years and primary students on undergraduate and Masters level courses. **Handbook of Research on Science Education, Volume II** Norman G. Lederman, Sandra K. Abell, 2014-07-11 Building on the foundation set in Volume I, a landmark synthesis of research in the field, Volume II is a comprehensive state-of-the-art new volume highlighting new and emerging research perspectives. The contributors, all experts in their research areas, represent the international and gender diversity in the science education research community. The volume is organized around six themes: theory and methods of science education research; science learning culture; gender and society and science learning; science teaching; curriculum and assessment in science; science teacher education. Each chapter presents an integrative review of the research on the topic, pulling together the existing research, working to understand the historical trends and patterns in that body of scholarship, describing how the issue is conceptualized within the literature, how methods and theories have shaped the outcomes of the research, and where the strengths, weaknesses, and gaps are in the literature. Providing guidance to science education faculty and graduate students and leading to new insights and directions for future research, the Handbook of Research on Science Education, Volume II is an essential resource for the entire science education community. *Teaching Science Through Technology* Shineberg, Simon & Schuster, 1996-09-01 **Teaching Science and Investigating Environmental Issues with Geospatial Technology** James MaKinster, Nancy Trautmann, Michael Barnett, 2013-11-05 The emerging field of using geospatial technology to teach science and environmental education presents an excellent opportunity to discover the ways in which educators use research-grounded pedagogical commitments in combination with their practical experiences to design and implement effective teacher professional development projects.

Often missing from the literature are in depth explicit discussions of why and how educators choose to provide certain experiences and resources for the teachers with whom they work and the resulting outcomes The first half of this book will enable science and environmental educators to share the nature and structure of large scale professional development projects while discussing the theoretical commitments that undergird their work Many chapters will include temporal aspects that present the ways in which projects change over time in response to evaluative research and practical experience In the second half of the book faculty and others whose focus is on national and international scales will share the ways in which they are working to meet the growing needs of teachers across the globe to incorporate geospatial technology into their science teaching These efforts reflect the ongoing conversations in science education geography and the geospatial industry in ways that embody the opportunities and challenges inherent to this field This edited book will serve to define the field of teacher professional development for teaching science using geospatial technology As such it will identify short term and long term objectives for science environmental and geography educators involved in these efforts As a result this book will provide a framework for future projects and research in this exciting and growing field
