

WHAT IS A CONSTANT?

In mathematics, a **constant** refers to a fixed value that does not change throughout a particular equation or problem. *It remains the same regardless of other variables or inputs.*

For example, in the equation $y=3x+5$, the constant is 5 because it always stays the same, while the variable x and its coefficient 3 can vary. Constants are important in mathematical calculations, as they provide stability and serve as reference points for solving equations, graphing functions, and performing various mathematical operations.

The diagram shows the equation $3x + 5$ with labels and arrows. The number 3 is labeled as the "Coefficient" with an arrow pointing to it. The letter x is labeled as the "Variable" with an arrow pointing to it. The plus sign is labeled as the "Addition Operator" with an arrow pointing to it. The number 5 is labeled as the "Constant" with an arrow pointing to it.
