Visual Languages:

Visual Languages Shi-Kuo Chang, 2012-12-06 This book is intended as both an introduction to the state of the art in visual languages as well as an exposition of the frontiers of research in advanced visual languages. It is for computer scientists, computer engineers, information scientists, application programmers, and technical managers responsible for software development projects who are interested in the methodology and manifold applications of visual languages and visual programming. The contents of this book are drawn from invited papers as well as selected papers from two workshops: the 1985 IEEE Workshop on Languages for Automation Cognitive Aspects in Information Processing which was held in Mallorca, Spain, June 28-30, 1985, and the 1984 IEEE Workshop on Visual Languages which was held in Hiroshima, Japan, December 7-9, 1984. Panos Ligomenides and I organized the technical program of LFA 85, and Tadao Ichikawa and I organized the technical program of VL 84. Both workshops have now become successful annual events in their own right. The intersecting area of visual languages and visual programming especially has become a fascinating new research area. It is hoped that this book will focus the reader's attention on some of the interesting research issues as well as the potential for future applications. After reading this book, the reader will undoubtedly get an impression that visual languages and the concept of generalized icons can be studied fruitfully from many different perspectives including computer graphics, formal language theory, educational methodology, cognitive psychology, and visual design. Visual Language Theory Kim Marriott, Bernd Meyer, 2012-12-06 Kim Marriott, Bernd Meyer Communication is one of the hallmarks of humans. When we think of human communication, most people first think of spoken and written languages. These are similar in that symbols in the language are encountered and processed sequentially, either temporally as they are spoken or as characters are read across a page. However, not all human communication is sequential in nature. Important components of human communication are visual languages such as maps or diagrams. In these languages, the basic symbols are not encountered sequentially but rather seen together at a glance. Visual languages are ubiquitous in human cultures, ranging from traditional paintings of central Australian aborigines, which are in part maps of the countryside, to an architect's design of a new building. Visual languages have been employed from earliest pre-history to the present and are used in almost every human endeavor. They cover the entire spectrum of human expression, ranging from fine art such as an abstract expressionist's private language to precise technical communication using rigorously defined notation such as musical notation, mathematical notation, or street maps. Some visual languages such as sign languages used by the deaf community substitute spoken language entirely. Indeed, sign languages, for example American Sign Language, are a particularly interesting instance of visual communication since they use three-dimensional spatial arrangements of signs in combination with their sequential temporal order to constitute meaning. **Handbook of Visual Languages for Instructional Design: Theories and Practices** Botturi, Luca, Stubbs, Todd, 2007-12-31 Presents languages and notation systems of ID and the integration of these technologies in education.

Visual Languages and Applications Tadeo Ichikawa, Erland Jungert, Robert R. Korfhage, 1990-10-31 The interface between the user of a computer based information system and the system itself has been evolving at a rapid rate The use of a video screen with its color and graphics capabilities has been one factor in this evolution The development of light pens mice and other screen image manipulation devices has been another With these capabilities has come a natural desire to find more effective ways to make use of them In particular much work has gone into the development of interface systems that add visual elements such as icons and graphics to text The desire to use these visual elements effectively in communication between the user and the system has resulted in a healthy competition of ideas and discussion of the principles governing the development and use of such elements The present volume chronicles some of the more significant ideas that have recently been presented The first volume in this series on the subject *Visual Languages* Chang Ichikawa and Ligomenides eds Plenum 1986 covered work done in the early days of the field of visual languages Here we represent ideas that have grown out of that early work arranged in six sections Theory Design Systems Visual Programming Algorithm Animation Simulation Animation and Applications I THEORY Fundamental to the concept of visual languages is the conviction that diagrams and other visual representations can aid understanding and communication of ideas We begin this volume with a chapter by Fanya S
