Visualization In Science Education:

Visualization in Science Education John K. Gilbert, 2005-07-05 Visualization meaning both the perception of an object that is seen or touched and the mental imagery that is the product of that perception is believed to be a major strategy in all thought. It is particularly important in science which seeks causal explanations for phenomena in the world as experienced. Visualization must therefore play a major role in science education. This book addresses key issues concerning visualization in the teaching and learning of science at any level in educational systems. Visualization in Science Education draws on the insights from cognitive psychology, science and education by experts from Australia, Israel, Slovenia, UK and USA. It unites these with the practice of science education, particularly the ever increasing use of computer managed modelling packages especially in chemistry. The first section explores the significance and intellectual standing of visualization. The second section shows how the skills of visualization have been developed practically in science education. This is followed by accounts of how the educational value of visualization has been integrated into university courses in physics, genomics and geology. The fourth section documents experimental work on the classroom assessment of visualization. An endpiece summarises some of the research and development needed if the contribution of this set of universal skills is to be fully exploited at all levels and in all science subjects.

Science Teachers' Use of Visual Representations Billie Eilam, John K. Gilbert, 2014-07-11 This book examines the diverse use of visual representations by teachers in the science classroom. It contains unique pedagogies related to the use of visualization, presents original curriculum materials as well as explores future possibilities. The book begins by looking at the significance of visual representations in the teaching of science. It then goes on to detail two recent innovations in the field: simulations and slowmotion, a process of explicit visualization. It also evaluates the way teachers have used different diagrams to illustrate concepts in biology and chemistry. Next, the book explores the use of visual representations in culturally diverse classrooms, including the implication of culture for teachers' use of representations, the crucial importance of language in the design and use of visualizations, and visualizations in popular books about chemistry. It also shows the place of visualizations in the growing use of informal, self-directed science education.

Overall the book concludes that if the potential of visualizations in science education is to be realized in the future the subject must be included in both pre service and in service teacher education It explores ways to develop science teachers representational competence and details the impact that this will have on their teaching The worldwide trend towards providing science education for all coupled with the increased availability of color printing access to personal computers and projection facilities has lead to a more extensive and diverse use of visual representations in the classroom This book offers unique insights into the relationship between visual representations and science education making it an ideal resource for educators as well as researchers in science education visualization and pedagogy

Gilbert, Miriam Reiner, Mary Nakhleh, 2007-12-05 External representations pictures diagrams graphs concrete models have always been valuable tools for the science teacher This book brings together the insights of practicing scientists science education researchers computer specialists and cognitive scientists to produce a coherent overview It links presentations about cognitive theory its implications for science curriculum design and for learning and teaching in classrooms and laboratories

Visualization in Mathematics, Reading and Science Education Linda M. Phillips, Stephen P. Norris, John S. Macnab, 2010-09-02 Science education at school level worldwide faces three perennial problems that have become more pressing of late These are to a considerable extent interwoven with concerns about the entire school curriculum and its reception by students The first problem is the increasing intellectual isolation of science from the other subjects in the school curriculum Science is too often still taught didactically as a collection of pre determined truths about which there can be no dispute As a consequence many students do not feel any ownership of these ideas Most other school subjects do somewhat better in these regards For example in language classes students suggest different interpretations of a text and then debate the relative merits of the cases being put forward Moreover ideas that are of use in science are presented to students elsewhere and then re taught often using different terminology in science For example algebra is taught in terms of $x y z$ in mathematics classes but students are later unable to see the relevance of that to the meaning of the universal gas laws in physics where $p v t$ are used The result is that students are confused and too often alienated leading to their failure to achieve that extraction of an education from a scheme of instruction which Jerome Bruner thought so highly desirable

Knowledge Visualization and Visual Literacy in Science Education Ursyn, Anna, 2016-05-31 Effective communication within learning environments is a pivotal aspect to students success By enhancing abstract concepts with visual media students can achieve a higher level of retention and better understand the presented information Knowledge Visualization and Visual Literacy in Science Education is an authoritative reference source for the latest scholarly research on the implementation of visual images aids and graphics in classroom settings and focuses on how these methods stimulate critical thinking in students Highlighting concepts relating to cognition communication and computing this book is ideally designed for researchers instructors academicians and students
