chapter is the notion that the world of work and employment relations has changed substantially since the halcyon days of IR throughout the Dunlop Era of the 1950s. However, many areas of enquiry remain and more questions have developed with society and technology. This Handbook reflects this view. As the field of study and practice continues to evolve throughout the twenty-first century, what lessons have we learnt from the past and what can we expect in the future? Academics and postgraduate students researching industrial relations, human resource management, employment relations, industrial sociology, and sociology of work will find this important resource invaluable.

The Future of Work, Employment and Social Protection Peter Auer, Bernard Gazier, 2002 This volume comprises the papers and debates of the second France ILO Symposium on the future of work, employment, and social protection. Reflecting the aim of the Symposium itself, the book provides in-depth reflections on work, employment, and social protection. Designed to be more than an account of the discussions, this book is a useful tool for all those interested in labour market transition and the increasing importance of female labour for the future of the labour markets, particularly in the developed world. The book discusses the need for more family-friendly policies and a more radical policy of equality between the sexes. The legal dimensions of labour market change are also debated, and the book explores the positive and negative sides of globalization and its links with technological change.

[The Great Skills Gap](#) Jason Wingard, Christine Farrugia, 2021-06-08 An extraordinary confluence of forces stemming from automation and digital technologies is transforming both the world of work and the ways we educate current and future employees to contribute productively to the workplace. The Great Skills Gap opens with the premise that the exploding scope and pace of technological innovation in the digital age is fast transforming the fundamental nature of work. Due to these developments, the skills and preparation that employers need from their talent pool are shifting. The accelerated pace of evolution and disruption in the competitive business landscape demands that workers be not only technically proficient but also exceptionally agile in their capacity to think and act creatively and quickly learn new skills. This book explores how these transformative forces are or should be driving innovations in how colleges and universities prepare students for their careers. Focused on the impact of this confluence of forces at the nexus of work and higher education, the book's contributors, an illustrious group of leading educators, prominent employers, and other thought leaders, answer profound questions about how
