

# Periodic Table

These are the 118 currently known and officially named elements that comprise the periodic table (IUPAC, 2016). Each element is represented by an image produced for the Visual Elements project.

The periodic table arranges the elements, with their atomic physical and chemical properties, in order of atomic number and by their electronic configuration. It groups elements into the s-block, d-block, p-block and f-block, which are closely related physical properties. However, elements in order of their cell are listed below in groups. Properties of elements change in a systematic way through a period.

**Atomic number**  
The atomic number is equal to the number of protons in the nucleus.

**Relative atomic mass**  
The ratio of the average mass of the atoms to the mass of an atom of carbon-12 in its ground state. A number of atoms, each with that relative mass, will have a mass of 12g.
