JICA Annual Report Kokusai Kyōryoku Kikō, **Metal Recycling**, 2013. Metal recycling is a complex business that is becoming increasingly difficult. Recycling started long ago when people realized that it was more resource and cost efficient than just throwing away the resources and starting all over again. In this report, we discuss how to increase metal recycling rates and thus resource efficiency from both quantity and quality viewpoints. The discussion is based on data about recycling input and the technological infrastructure and worldwide economic realities of recycling. Decision makers set increasingly ambitious targets for recycling, but far too much valuable metal today is lost because of the imperfect collection of end-of-life (EoL) products, improper practices, or structural deficiencies within the recycling chain, which hinder achieving our goals of high resource efficiency and resource security and of better recycling rates.
