**Multiparameter Processes** Davar Khoshnevisan, 2006-04-10 Multi parameter processes extend the existing one parameter theory in an elegant way and have many applications to other fields in mathematics such as real analysis functional analysis group theory and analytic number theory to name a few This book on the vast and rapidly developing subject of random fields is designed for a second graduate course in probability Recent work on random fields has made it possible to make it an expository subject which interacts with several other areas in mathematics and has enough mathematical depth to be of use to pure as well as applied mathematicians of many backgrounds

**Topics in Spatial Stochastic Processes** Vincenzo Capasso, Ely Merzbach, B. Gail Ivanoff, Marco Dozzi, Robert Dalang, Thomas Mountford, 2003-01-01 The theory of stochastic processes indexed by a partially ordered set has been the subject of much research over the past twenty years The objective of this CIME International Summer School was to bring to a large audience of young probabilists the general theory of spatial processes including the theory of set indexed martingales and to present the different branches of applications of this theory including stochastic geometry spatial statistics empirical processes spatial estimators and survival analysis This theory has a broad variety of applications in environmental sciences social sciences structure of material and image analysis In this volume the reader will find different approaches which foster the development of tools to modelling the spatial aspects of stochastic problems

**Set-Indexed Martingales** Gail Ivanoff, Ely Merzbach, 2024-12-15 Set Indexed Martingales offers a unique comprehensive development of a general theory of Martingales indexed by a family of sets The authors establish for the first time an appropriate framework that provides a suitable structure for a theory of Martingales with enough generality to include many interesting examples Developed from first principles the theory brings together the theories of Martingales with a directed index set and set indexed stochastic processes Part One presents several classical concepts extended to this setting including stopping predictability Doob Meyer decompositions martingale characterizations of the set indexed Poisson process and Brownian motion Part Two addresses convergence of sequences of set indexed processes and introduces functional convergence for processes whose sample paths

live in a Skorokhod type space and semi functional convergence for processes whose sample paths may be badly behaved Completely self contained the theoretical aspects of this work are rich and promising With its many important applications especially in the theory of spatial statistics and in stochastic geometry Set Indexed Martingales will undoubtedly generate great interest and inspire further research and development of the theory and applications *Conditional Measures and Applications* M.M.
