

The Learning Process

The Nature Of The Learning Process

Walter John Gifford

The Nature Of The Learning Process:

The Nature of the Learning Process Harvey Jackins, 1966 **The Problem of Original Nature and the Learning Process in Relation to Present Day Education** John Stanley Gray, 1929 The Nature and Direction of Learning William Henry Burton, 1929 As the title indicates a considerable portion of this book is devoted to a consideration of the learning process It is a text that deals more with the theory of method than with the details of classroom procedure The treatment of the direction of learning occupies nearly three fourths of the book and covers the topics commonly discussed by writers in this field Interestingly the author divides this book into five units each of which is subdivided into several problems The typical treatment of a problem includes four phases 1 exploratory and pretest questions 2 a discussion of the problem 3 discussion questions for summarizing and testing and 4 a list of parallel readings The exploratory and pretest questions a distinctive characteristic of this volume are ingenious and serve to stimulate thinking about the problems considered This book with its treatment of methods of teaching should be a highly effective instrument for use in the professional training of teachers The Learning Process Stephen Sheldon Colvin, Lillian Moller Gilbreth, 1911 **The Nature of Learning Disabilities** Kenneth A. Kavale, Steven R. Forness, 2012-12-06 The category of learning disabilities continues to be among the most contentious in special education Much of the debate and dissent emanates from a lack of understanding about its basic nature The failure to evolve a comprehensive and unified perspective about the nature of learning disabilities has resulted in the concept being lost The loss is best illustrated through the failure to answer this seemingly simple question What is a learning disability Using historical empirical theoretical conceptual and philosophical analyses this volume explores a number of problems and issues facing the field of learning disabilities The chapters cover historical influences definitional problems primary characteristics assessment practices theoretical development major themes research and measurement models and long term outcomes The goal is to explicate the nature of learning disabilities by analyzing what it was supposed to be what it has become and what it might be A predominant theme running through this text is the necessity for the field of learning disabilities to regain integrity by recapturing its essence **The Nature of Statistical Learning Theory** Vladimir Vapnik, 2013-06-29 The aim of this book is to discuss the fundamental ideas which lie behind the statistical theory of learning and generalization It considers learning as a general problem of function estimation based on empirical data Omitting proofs and technical details the author concentrates on discussing the main results of learning theory and their connections to fundamental problems in statistics These include the setting of learning problems based on the model of minimizing the risk functional from empirical data a comprehensive analysis of the empirical risk minimization principle including necessary and sufficient conditions for its consistency non asymptotic bounds for the risk achieved using the empirical risk minimization principle principles for controlling the generalization ability of learning machines using small sample sizes based on these bounds the Support Vector methods that control the generalization ability when estimating function using small sample size

The second edition of the book contains three new chapters devoted to further development of the learning theory and SVM techniques. These include the theory of direct method of learning based on solving multidimensional integral equations for density conditional probability and conditional density estimation, a new inductive principle of learning. Written in a readable and concise style, the book is intended for statisticians, mathematicians, physicists, and computer scientists. Vladimir N. Vapnik is Technology Leader at T Labs Research and Professor of London University. He is one of the founders of **The Nature of Statistical Learning Theory**. Vladimir N. Vapnik, 2013-04-17. The aim of this book is to discuss the fundamental ideas which lie behind the statistical theory of learning and generalization. It considers learning from the general point of view of function estimation based on empirical data. Omitting proofs and technical details, the author concentrates on discussing the main results of learning theory and their connections to fundamental problems in statistics. These include the general setting of learning problems and the general model of minimizing the risk functional from empirical data, a comprehensive analysis of the empirical risk minimization principle, and shows how this allows for the construction of necessary and sufficient conditions for consistency, non-asymptotic bounds for the risk achieved using the empirical risk minimization principle, principles for controlling the generalization ability of learning machines using small sample sizes, introducing a new type of universal learning machine that controls the generalization ability.

Student Responsibility and the Nature of the Learning Process Peter Henry Wagschal, 1969

Educational Research and Innovation: The Nature of Learning Using Research to Inspire Practice OECD, 2010-08-09. This book brings together the lessons of research on both the nature of learning and different educational applications, and it summarises these as seven key concluding principles.
