Ultrahigh Pressure Metamorphism UHPM is a fast growing discipline that was established 25 years ago after discoveries of high pressure minerals coesite and diamonds. The current explosion of research on UHPM terranes reflects their significance for understanding large scale mantle dynamics, major elements of plate tectonics such as continental collisions, deep subduction and exhumation, mountains building, geochemical recycling from surface to the core, and a deep storage of light elements participating in green house effects in the atmosphere. This book provides insights into the formation of diamond and coesite at very high pressures and explores new ideas regarding the tectonic setting of this style of metamorphism. Important, authoritative and comprehensive, one stop resource for the growing ultrahigh pressure metamorphism UHPM research community. A forward looking approach founded upon a detailed historical perspective on UHPM presents the trends in discovery methodology and theory over the last 25 years, allowing readers to gain a clear understanding of the current trends and the approaches that will shape the science in the future. A highly diverse set of articles covering a wide range of methods and sub disciplines.

Ultrahigh-pressure Mineralogy Russell Julian Hemley, 1998. *Reviews in Mineralogy Geochemistry*. RIMG volumes contain concise advances in theoretical and/or applied mineralogy, crystallography, petrology and geochemistry.

Ophiolite Concept and the Evolution of Geological Thought Yildirim Dilek, Sally Newcomb, 2003-01-01. **EPSL Frontiers** A. Halliday, 2005-02-09. A new section of short reviews called Frontiers was introduced within the Elsevier journal *Earth and Planetary Science Letters* (EPSL) in 2002 under the Editorship of Alex Halliday from ETH Zurich, Switzerland. These high profile Frontiers articles are written by leading experts and published as the opening pages to regular issues of EPSL. The reason for this development is that the Editors of EPSL believe there is an important niche to be filled with fast communications that bring the scientific community up to speed on interesting new areas of science. Frontiers articles are therefore specifically intended for the non-specialist earth and planetary science readership. In order to reach a broader readership, those without subscriptions to the journal, Frontiers articles will now also be published in a new book series, the EPSL Frontiers series. Volume 1 will contain all 2002 and 2003 Frontiers articles. Future volumes will contain one year of articles each.

The Crust R.L. Rudnick, Heinrich D. Holland, Roberta L. Rudnick, 2005-12-19. *The Treatise on Geochemistry* is the first work providing a comprehensive integrated summary of the present state of geochemistry. It deals with all the major subjects in the field, ranging from the chemistry of the solar system to environmental geochemistry. *The Treatise on Geochemistry* has drawn on the expertise of outstanding scientists throughout the world, creating the reference work in geochemistry for the next decade. Each volume consists of fifteen to twenty five chapters written by recognized authorities in their fields and chosen by the Volume Editors in consultation with

the Executive Editors Particular emphasis has been placed on integrating the subject matter of the individual chapters and volumes Elsevier also offers the Treatise on Geochemistry in electronic format via the online platform ScienceDirect the most comprehensive database of academic research on the Internet today enhanced by a suite of sophisticated linking searching and retrieval tools

Ultrahigh Pressure Metamorphism Dennis A. Carswell, Roberto Compagnoni, 2014 This is the first volume in this series dealing with a petrological subject and contains the contributions of the lectures given at the 5th School of the European Mineralogical Union EMU on Ultrahigh Pressure Metamorphism held in Budapest from 21 to 25 July 2003

Liebscher, Gerhard Franz, 2004 Volume 56 of the Reviews in Mineralogy and Geochemistry reviews the current state of knowledge on the epidote minerals with special emphasis on the advances that were made since the comprehensive review of Deer et al 1986 In the Introduction we review the structure optical data and crystal chemistry of this mineral group all of

which form the basis for understanding much of the following material in the volume In addition we provide some information on special topics such as morphology and growth deformation behavior and gemology Thermodynamic properties Chapter 2 Gottschalk the spectroscopy of the epidote minerals Chapter 3 Liebscher and a review of the experimental studies Chapter 4 Poli and Schmidt constitute the first section of chapters These fields are closely related and all three chapters show the significant progress over the last years but that some of the critical questions such as the problem of miscibility and miscibility gaps are still not completely solved This section concludes with a review of fluid inclusion studies Chapter 5 Klemm a topic that turned out to be of large interest for petrogenetic interpretation and leads to the description of natural epidote occurrences in the second section of the book These following chapters review the geological environments of the epidote minerals from low temperature in geothermal fields Chapter 6 Bird and Spieler to common metamorphic rocks Chapter 7 Grapes and Hoskin and to high and ultrahigh pressure Chapter 8 Enami Liou and Mattinson and the magmatic regime Chapter 9 Schmidt and Poli Allanite Chapter 10 Gier and Sorensen and piemontite Chapter 11 Bonazzi and Menchetti on which a large amount of information is now available are reviewed in separate chapters Finally trace element Chapter 12 Frei Liebscher Franz and Dulski and isotopic studies both stable and radiogenic isotopes Chapter 13 Morrison are considered We found it unavoidable that there is some overlap between individual chapters This is an inherited problem in a mineral group such as the epidote minerals which forms intensive solid solutions between the major components of rock forming minerals as well as with trace elements
