Zerodimensional Schemes:

Hilbert Schemes of Zero-Dimensional Subschemes of Smooth Varieties Lothar Göttsche, 2006-11-15 In this book we study Hilbert schemes of zero dimensional subschemes of smooth varieties and several related parameter varieties of interest in enumerative geometry The main aim here is to describe their cohomology and Chow rings Some enumerative applications are also given The Weil conjectures are used to compute the Betti numbers of many of the varieties considered thus also illustrating how this powerful tool can be applied The book is essentially self contained assuming only a basic knowledge of algebraic geometry it is intended both for graduate students and research mathematicians interested in Hilbert schemes enumerative geometry and moduli spaces [Zero-Dimensional Schemes](#) Ferruccio Orecchia, Luca Chiantini, 2016-11-21 No detailed description available for Zero Dimensional Schemes *The Zero Dimensional Scheme Defined by the Intersection of Two Curve Singularities* J. Elias, 1992 *Hilbert Functions of Zero-dimensional Schemes in Uniform Position [microform]* Chandler, Karen Anne, 1992 **Hilbert Functions of Zero-dimensional Schemes in Uniform Position** Karen Anne Chandler, 1992 *Singular Algebraic Curves* Gert-Martin Greuel, Christoph Lossen, Eugenii Shustin, 2018-12-30 Singular algebraic curves have been in the focus of study in algebraic geometry from the very beginning and till now remain a subject of an active research related to many modern developments in algebraic geometry symplectic geometry and tropical geometry The monograph suggests a unified approach to the geometry of singular algebraic curves on algebraic surfaces and their families which applies to arbitrary singularities allows one to treat all main questions concerning the geometry of equisingular families of curves and finally leads to results which can be viewed as the best possible in a reasonable sense Various methods of the cohomology vanishing theory as well as the patchworking construction with its modifications will be of a special interest for experts in algebraic geometry and singularity theory The introductory chapters on zero dimensional schemes and global deformation theory can well serve as a material for special courses and seminars for graduate and post graduate students Geometry in general plays a leading role in modern mathematics and algebraic geometry is the most advanced area of research in geometry In turn algebraic curves for more than one century have been the central subject of algebraic geometry both in fundamental theoretic questions and in applications to other fields of mathematics and mathematical physics Particularly the local and global study of singular algebraic curves involves a variety of methods and deep ideas from geometry analysis algebra combinatorics and suggests a number of hard classical and newly appeared problems which inspire further development in this research area *Queen's Papers in Pure and Applied Mathematics* Queen's University (Kingston, Ont.), 2002 **Hilbert Schemes of Points and Infinite Dimensional Lie Algebras** Zhenbo Qin, 2018-02-26 Hilbert schemes which parametrize subschemes in algebraic varieties have been extensively studied in algebraic geometry for the last 50 years The most interesting class of Hilbert schemes are schemes of collections of points zero dimensional subschemes in a smooth algebraic surface Schemes turn out to be closely related to many areas of

mathematics such as algebraic combinatorics integrable systems representation theory and mathematical physics among others This book surveys recent developments of the theory of Hilbert schemes of points on complex surfaces and its interplay with infinite dimensional Lie algebras It starts with the basics of Hilbert schemes of points and presents in detail an example of Hilbert schemes of points on the projective plane Then the author turns to the study of cohomology of including the construction of the action of infinite dimensional Lie algebras on this cohomology the ring structure of cohomology equivariant cohomology of and the Gromov Witten correspondence The last part of the book presents results about quantum cohomology of and related questions The book is of interest to graduate students and researchers in algebraic geometry representation theory combinatorics topology number theory and theoretical physics **Collectanea Mathematica** ,2011

Configuration Spaces Over Hilbert Schemes and Applications Danielle Dias,Patrick Le Barz,1996-12-16 The main themes of this book are to establish the triple formula without any hypotheses on the genericity of the morphism and to develop a theory of complete quadruple points which is a first step towards proving the quadruple point formula under less restrictive hypotheses This book should be of interest to graduate students and researchers in the field of algebraic geometry The reader is expected to have some basic knowledge of enumerative algebraic geometry and pointwise Hilbert schemes
