Info-Gap Decision Theory Yakov

Ben-Haim,2006-10-11 Everyone makes decisions but not everyone is a decision analyst A decision analyst uses quantitative models and computational methods to formulate decision algorithms assess decision performance identify and evaluate options determine trade offs and risks evaluate strategies for investigation and so on Info Gap Decision Theory is written for decision analysts The term decision analyst covers an extremely broad range of practitioners Virtually all engineers involved in design of buildings machines processes etc or analysis of safety reliability feasibility etc are decision analysts usually without calling themselves by this name In addition to engineers decision analysts work in planning offices for public agencies in project management consultancies they are engaged in manufacturing process planning and control in financial planning and economic analysis in decision support for medical or technological diagnosis and so on and on Decision analysts provide quantitative support for the decision making process in all areas where systematic decisions are made This second edition entails changes of several sorts First info gap theory has found application in several new areas especially biological conservation economic policy formulation preparedness against terrorism and medical decision making Pertinent new examples have been included Second the combination of info gap analysis with probabilistic decision algorithms has found wide application Consequently hybrid models of uncertainty which were treated exclusively in a separate chapter in the previous edition now appear throughout the book as well as in a separate chapter Finally info gap explanations of robust satisficing behavior and especially the Ellsberg and Allais paradoxes are discussed in a new chapter together with a theorem indicating when robust satisficing will have greater probability of success than direct optimizing with uncertain models New theory developed systematically Many examples from diverse disciplines Realistic representation of severe uncertainty Multi faceted approach to risk Quantitative model based decision theory *Chaucer* William Tuckwell,1904 *Kierkegaard and Socrates* Jacob Howland,2006-04-24 This volume is a study of the relationship between philosophy and faith in S ren Kierkegaard s Philosophical Fragments It is also the first book to examine the role of Socrates in this body of writings illuminating the significance of Socrates for Kierkegaard s thought Jacob Howland argues that in the Fragments philosophy and faith are closely related passions A careful examination of the role of Socrates demonstrates that Socratic philosophical eros opens up a path to faith At the same time the work of faith which holds the self together with that which transcends it is essentially erotic in the Socratic sense of the term Chapters on Kierkegaard s Johannes Climacus and on Plato s Apology shed light on the Socratic character of the pseudonymous author of the Fragments and the role of the god in Socrates pursuit of wisdom Howland also analyzes the Concluding Unscientific Postscript and Kierkegaard s reflections on Socrates and Christ
