Scientific Computing on Supercomputers J.T. Devreese, P.E. Van Camp, 2012-12-06 The International Workshops on The Use of Supercomputers in Theoretical Science have become a tradition at the University of Antwerp Belgium The first one took place in 1984 This volume combines the proceedings of the second workshop December 12 1985 of the third June 16 1987 and of the fourth June 9 1988 The principal aim of the International Workshops is to present the state of the art in scientific high speed computation Indeed during the past ten years computational science has become a third methodology with merits equal to the theoretical and experimental sciences Regrettably access to supercomputers remains limited for academic researchers None theless supercomputers have become a major tool for scientists in a wide variety of scientific fields and they lead to a realistic solution of problems that could not be solved a

decade ago It is a pleasure to thank the Belgian National Science Foundation NFWO FNRS for the sponsoring of all the workshops These workshops are organized in the framework of the Third Cycle Vectorization Parallel Processing and Supercomputers which is also funded by the NFWO FNRS The other sponsor I want to thank is the University of Antwerp where the workshops took place The University of Antwerp UIA together with the NFWO FNRS are also the main sponsors of the ALPHA project which gives the scientists of Belgium the opportunity to obtain an easy supercomputer connection

The Conference on Computers in Physics Instruction Edward F. Redish, John S. Risley, 1990 Computers are revolutionizing activities in all areas of life Physics researchers accustomed to being at the forefront of technology have been deeply affected by the computer revolution This effect has serious implications for what is taught and how it is taught in the physics classroom This conference was organized to allow physics teachers and software developers in physics education to come together and see the state of the art in using computers to teach physics The conference included 39 invited lectures and 122 contributed presentations It introduced a number of innovations in the hope of increasing interactions and stimulating future contacts This document contains the text of the invited and contributed papers organized as follows 1 The Computer's Impact on the Physics Curriculum 2 Physics Computer Simulations 3 Computers in the Physics Laboratory 4 Physics Education Research and Computers 5 Computational Physics and Spreadsheets 6 Computer Tutorials in Physics 7 Physics Lecture Demonstrations Using Computers 8 Authoring Tools and Programming Languages 9 Computer Utilities for Teaching Physics 10 Computer Networking Workshops 11 Publishing Physics Software and 12 Videodiscs and Visualization for Physics Appended are author and general indexes a list of the contents of distributed software and a software order form

CW **Philosophical Transactions of the Royal Society of London**, 1988 *Performance Evaluation of Supercomputers* Joanne L. Martin, 1988 Although supercomputer systems are faster and have larger memory hierarchies than other computer systems such characteristics merely imply the existence of great potential power How much of that power can be harnessed productively is the central theme of performance evaluation A set of methods for evaluating the performance of applications on supercomputers has not yet been rigorously defined This volume is a compilation of research approaches and techniques that are a promising means to that end The contributions are grouped into three sections Contributors to Performance looks at applications algorithms compilers operating systems and memory issues Measurements and Metrics addresses some of the current techniques and methods of performance evaluation Among the topics are the performance monitoring capabilities of the CEDAR system the methodology behind the Livermore loops the empirical analysis of system performance and a software simulator developed in connection with the RP3 project Methods Models and Directions looks at ways of establishing a general and theoretical framework for supercomputer performance evaluation

Supercomputers, 1986 Combinatorial Scientific Computing Uwe Naumann, Olaf Schenk, 2012-01-25 Combinatorial Scientific Computing explores the latest research on creating algorithms and software tools to solve key combinatorial

problems on large scale high performance computing architectures It includes contributions from international researchers who are pioneers in designing software and applications for high performance computing systems The book offers a state of the art overview of the latest research tool development and applications It focuses on load balancing and parallelization on high performance computers large scale optimization algorithmic differentiation of numerical simulation code sparse matrix software tools and combinatorial challenges and applications in large scale social networks The authors unify these seemingly disparate areas through a common set of abstractions and algorithms based on combinatorics graphs and hypergraphs Combinatorial algorithms have long played a crucial enabling role in scientific and engineering computations and their importance continues to grow with the demands of new applications and advanced architectures By addressing current challenges in the field this volume sets the stage for the accelerated development and deployment of fundamental enabling technologies in high performance scientific computing
