**Surface Activity** Kaoru Tsujii,1998 Surfaces and interfaces are concepts of fundamental importance in materials science and technology All materials have surfaces When two or more materials are put together interfaces appear In composite materials interfaces play a crucial role in determining mechanical optical and electronic properties Surfaces and interfaces can be dramatically altered when surfactant molecules are applied to them modifying not only the interactions between two materials at the interface but also the bulk properties of a composite Surfactants are key materials in processes involving adhesion coating mixing domain formations and many other phenomena in the medical pharmaceutical chemical and electronic industries Surfactants exhibit a variety of interesting phenomena such as formations of micelles vesicles layers and gels They provide a fascinating example of self assembly Surfactants have many phases and undergo phase transitions between them Understanding these phenomena is a great challenge for physics and chemistry and is of increasing technological importance Dr Kaoru Tsujii is one of the pioneers and leaders in the science and technology of surfactants He has long explored the field both in theory and in industrial applications and seeks to demonstrate applications of surfactants in our everyday life and industry The book will serve as an excellent text and reference for researchers and students who wish to know more about surfactants
