Dyer, 2010-09-07 As many industries are beginning to learn pollution prevention technologies offer more than just a way to comply with regulations or even to do the right thing It also makes smart business sense The authors of this book both veterans of DuPont's in-house waste reduction team have put together a how to guide for locating and implementing the best pollution prevention strategies for particular manufacturing processes The book codifies elements of fundamental pollution prevention knowledge that are easily understood and broadly applicable across a wide range of industries At the heart of the book is what the authors call the 10 Step Method for Engineering Evaluations of Pollution Prevention Methods which breaks down the process to such simple steps as defining problems setting goals and identifying defining and evaluating alternative strategies

New Tools for Environmental Protection National Research Council, Division of Behavioral and Social Sciences and Education, Committee on the Human Dimensions of Global Change, 2002-07-13 Many people believe that environmental regulation has passed a point of diminishing returns the quick fixes have been achieved and the main sources of pollution are shifting from large point sources to more diffuse sources that are more difficult and expensive to regulate The political climate has also changed in the United States since the 1970s in ways that provide impetus to seek alternatives to regulation This book examines the potential of some of these new tools that emphasize education information and voluntary measures Contributors summarize what we know about the effectiveness of these tools both individually and in combination with regulatory and economic policy instruments They also extract practical lessons from this knowledge and consider what is needed to make these tools more effective The book will be of interest to environmental policy practitioners and to researchers and students concerned with applying social and behavioral sciences knowledge to improve environmental quality
