Some Current Mathematical Topics In Cancer Research:

Some Current Mathematical Topics in Cancer Research George W. Swan, 1977 Mathematical Models in Cancer Research, T. E. Wheldon, 1988 Cancer research deals with all aspects of malignant transformation tumour growth and the effects of treatment Mathematical models enable quantitative representations of the changes affecting cell state and cell number This book provides a review of the scope of mathematical modelling in cancer research bringing together for the first time a group of related mathematical topics including multistage carcinogenesis tumour growth kinetics growth control radiotherapy chemotherapy and biological targeting in cancer treatment Physicists and mathematicians interested in medical research biomathematicians biostatisticians radiation and medical oncologists and experimental and theoretical biologists will welcome this critical review of mathematical modelling in cancer research This book will also be of interest to clinicians basic cancer scientists and physicists working in radiotherapy departments and to postgraduate students on courses in oncology and subjects Optimization of Human Cancer Radiotherapy G.W. Swan, 2013-03-08 The mathematical models in this book are concerned with a variety of approaches to the manner in which the clinical radiologic treatment of human neoplasms can be improved These improvements comprise ways of delivering radiation to the malignancies so as to create considerable damage to tumor cells while sparing neighboring normal tissues There is no unique way of dealing with these improvements Accordingly in this book a number of different presentations are given Each presentation has as its goal some aspect of the improvement or optimization of radiotherapy This book is a collection of current ideas concerned with the optimization of human cancer radiotherapy It is hoped that readers will build on this collection and develop superior approaches for the understanding of the ways to improve therapy The author owes a special debt of thanks to Kathy Prindle who breezed through the typing of this book with considerable dexterity
