**The Big Switch (The War That Came Early, Book Three)** Harry Turtledove, 2012-06-26 In 1941 Winston Churchill was Hitler's worst enemy. Then a Nazi secret agent changed everything. What if Neville Chamberlain instead of appeasing Hitler had stood up to him in 1938? Enraged, Hitler reacts by lashing out at the West, promising his soldiers that they will reach Paris by the new year. Instead, three years pass, and with his genocidal apparatus not fully in place, Hitler barely survives a coup while Jews cling to survival and England and France wonder whether the war is still worthwhile. The stage is set for World War II to unfold far differently from the history we know, courtesy of Harry Turtledove, wizard of what-if in the continuation of his thrilling series *The War That Came Early*. Through the eyes of characters ranging from a brawling American serving with the Abraham Lincoln Brigade in Spain to a woman who has seen Hitler's evil face to face, *The Big Switch* rolls relentlessly forward into 1941. As the Germans and their Polish allies slam into the gut of the Soviet Union in the west, Japan pummels away in the east. Meanwhile, in the trenches of France, French and Czech forces are outmanned but not outfought by their Nazi enemy. Then the stalemate is shattered. In England, Winston Churchill dies suddenly, leaving the gray men wondering who their real enemy is. And as the USSR makes peace with Japan, the empire of the Rising Sun looks westward, its war with America about to begin.

Cooperative Optimal Control of Hybrid Energy Systems Dong Yue, Huifeng Zhang, Chunxia Dou, 2021-02-15. This book mainly investigates the cooperative optimal control of hybrid energy system. It presents security control, multi-objective optimization, distributed optimization, and distributed control approaches for tackling with security, economic, and stability problems of the hybrid energy system. It aims to solve some challenging problems, including security issues, economic cost, or benefits from both power generation side and load demand side, and coordination among different power generators. The methods proposed in this book are novel and attractive; it consists of the hierarchical optimal control strategy for the security issue, multi-objective optimization for both economic and emission issues, and distributed optimal control for coordination among power generators. Readers can learn novel methods or techniques for tackling with the security issue, multiple objective problem, and distributed coordination problem. It also may inspire readers to improve some drawbacks of existing alternatives. Some fundamental knowledge prepared to read this book includes basic principles of the multi-agents system, robust optimization, Pareto dominance optimization, and background of electrical engineering and renewable energy.
