The Neurosciences Francis Otto Schmitt,1970 **The Neurosciences** ,1970 **The Neurosciences** Francis Otto Schmitt,1970 *The Neurosciences* Francis O. Schmitt,1970 *The Neurosciences: Paths of Discovery*, I F. WORDEN,J. SWAZEY,G. ADELMAN,2012-12-06 To commemorate properly the 70th birthday of a man who by his very nature is too busy to pause for any kind of ceremonial event unless it has a concomitant functional output was a difficult problem for the Staff and Associates of the Neurosciences Research Program Frank F O S has always dreaded the prospect that sometime it might be appropriate for his colleagues to present him a Fest schrift In fact Fest me no Schriften became his battle cry expressing his feeling that the idea of testimonials clustered into a book was anathema So the break through idea for the planners was to organize a symposium around the theme of discovery in neuroscience that would be valuable scientifically and in its demonstration of interdisciplinary interaction would support that emphasis in Frank s career After much planning a program was developed beginning with a birthday party the evening before followed by the two day symposium and closing with the first F O Schmitt Lecture in Neuroscience We hope that publication of the scientific proceedings in this volume will be of interest not only to the neuroscience community but also to a broad general readership interested in discovery understanding and the creative processes in scientific work An organizing committee chaired by Fred Worden collected advice and guidance leading to the selection of speakers whose scientific careers have played an important part in the recent history of modern neuroscience *Toward a Science of Consciousness II* Stuart R. Hameroff,Alfred W. Kaszniak,Alwyn Scott,1998 This text originates from the second of two conferences discussing the concept of consciousness In 15 sections this book demonstrates the broad range of fields now focusing on consciousness *Brain and Mind* G. E. W. Wolstenholme,Maeve O'Connor,2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world [The Neurosciences](#) Francis Otto Schmitt,1970 *The Never-ceasing Search* Francis Otto Schmitt,1990 Frank Schmitt has for two thirds of a century been searching for and in many cases finding explanations of major biomedical importance His is a very human story of a youth in high school doing experiments in a make shift chemical laboratory in the attic of the family home of a young university student who organized a students science society and whose undergraduate research on cell structure was published in major professional journals of a medical school student who wrote a thesis that attracted the attention of cardiologists for many years of a devoted husband who with his young wife spent two postdoctoral years in Berkeley London and Berlin and later made two trips around the world with her as he set up a worldwide network of neuroscientists As a young scientist at Washington University Schmitt investigated polarization optical and x ray diffraction methods to discover the molecular structure of living tissues this long before

molecular biology was established as a scientific discipline Schmitt was called to head biology at MIT in 1941 There he added electron microscopy to his ultrastructural repertoire and used much of it in wartime research As an Institute Professor MIT s highest rank he became a leader in the founding and characterization of the fields of biophysics and neuroscience Schmitt was also deeply committed to music along with his wife and had an interest in theology Photos *The Mindful Brain* Gerald M. Edelman, Vernon B. Mountcastle, 1982-03-30 A proposal by two eminent biological scientists for a mechanism whereby mind becomes manifest from the operations of brain tissue This significant contribution to neuroscience consists of two papers the first by Mountcastle and the second by Edelman Between them they examine from different but complementary directions the relationships that connect the higher brain memory learning perception thinking with what goes on at the most basic levels of neural activity with particular stress on the role of local neuronal circuits Edelman s major hypothesis is that the conscious state results from phasic reentrant signaling occurring in parallel processes that involve associations between stored patterns and current sensory or internal input This selective process occurs by the polling of degenerate primary repertoires of neuronal groups that are formed during embryogenesis and development Edelman s theory extrapolates to the brain the selectionistic immunological theories for which he was awarded the 1972 Nobel Prize in Physiology or Medicine Mountcastle s paper reviews what is known about the actual structure of various parts of the neo cortex He relates the large entities of the neocortex to their component modules the local neuronal circuits and shows how the complex interrelationships of such a distributed system can yield dynamic distributed functioning There are strong conceptual parallels between Mountcastle s idea of cortical columns and their functional subunits and Edelman s concept of populations of neurons functioning as processors in a brain system based on selectional rather than instructional principles These parallels are traced and put into perspective in Francis Schmitt s Introduction **The Dynamic Structure of Cell Membranes** Donald F. Hölzl Wallach, H. Fischer, 2012-12-06 HERBERT FISCHER Max Planck Institut für Immunbiologie Freiburg Zähringen With 3 Figures Ladies and Gentlemen On behalf of the organizers of the 22nd Mosbach Colloquium Mrs HOLZL WALLACH STOFFEL WIEGANDT and myself I bid you all a hearty welcome We thank you all for coming and naturally feel particular appreciation for the presence of the invited speakers But thanks to the tradition that the Mosbach Colloquia have enjoyed for 22 years we did not need to work very hard since most of our invitations were accepted without hesitation Perhaps some of you will wonder why Mosbach and its tradition means so much especially to the older ones amongst us In any event at a time when we were much hungrier and thirstier than we are today Mosbach became a unique place where we could satisfy our spiritual as well as our physical hunger It was here where we could find the friendly and peaceful atmosphere which helped us to establish contacts with colleagues from foreign countries and from distant scientific fields which often led to lasting communication and cooperation The initiator of these Colloquia my teacher Kurt Felix imparted to these gatherings a pioneer spirit which is more needed today than in the past particularly because we are now 500 rather than 50 to 100 participants Indeed we as

organizers have had to ask ourselves whether it is still possible to have an exciting lecture series combined with the leisure and opportunity for spontaneous questioning and stimulating individual discussion The Neurosciences ,1972 **The Neurosciences** Gardner C. Kiffin Penry, 1978 **Dimensions of Behavior** Leon Wurmser, Ellen McDaniel, 2013-10-22

Dimensions of Behavior The Psychiatric Foundations of Medicine provides the general background of the field and lays the foundations of the origins of behavior It is a modern textbook of psychiatry written specifically for medical students and physicians In its comprehensive scope it contains the contributions of all the disciplines that are relevant to the behavioral psychological social and humanistic aspects of medicine as well as the contributions of clinical psychiatry that constitute an integral part of the healing art and science of medicine The book is organized into six parts Parts I and II are introductory and present the historical development of psychological thinking in medicine and the evolving status of psychiatry in the contemporary scene with an emphasis on the need for a new medical model They further attempt to sketch a general conceptualization of human behavior that transcends the disciplinary boundaries of biological and psychosocial sciences through an introduction into the philosophical and epistemological approaches to studying man and his behavior Part III introduces basic concepts related to an evolutionary understanding of human behavior together with contributing extrapolations from ethological and laboratory animal studies Parts IV through VI present the developmental dimension of behavior Human development is discussed from the point of view of its biological foundations and genetic determinants from the point of view of the various psychological theories of personality development and in terms of the developmental stages of man This longitudinal perspective of behavior provides the fundamental considerations for understanding the uniqueness of the individual
