Aligning for Learning Donald H. Wulff, Wayne H. Jacobson, 2005-07-15 *Aligning for Learning* offers faculty, instructional developers, administrators, and researchers a clear model through which to approach the complexities of effective teaching and learning. The alignment model is the culmination of 20 years of research done by Donald Wulff and others at the Center for Instructional Development and Research at the University of Washington. It helps instructors incorporate instructional components and communication strategies into a representation of teaching effectiveness related to rapport, structure, engagement, and interaction in an effort to align themselves, their content, and their students in a consistent learning goal. This book combines the alignment model with the contributors' years of experience as instructors, instructional developers, and administrators to produce a practical volume on teaching and learning that contains ideas applicable to a variety of institutions and instructional settings. Divided into five parts, this book:

- Explains the alignment model as a tool to teaching effectiveness.
- Addresses the importance of inclusive teaching and learning.
- The use of the alignment model in designing courses.
- The use of assessment in support of alignment.
- Alignment issues in evaluation.

Illustrates the application of alignment in various instructional contexts such as large classes, team teaching, and mentoring. Demonstrates how the alignment model can be used to advance the scholarship of teaching and learning and its role in faculty reward systems. Provides key considerations in the application of alignment and some thoughts on the future of the alignment model.

On Becoming a Productive University James E. Groccia, Judith E. Miller, 2005-03-15 In 1987 the U.S. Congress established the Malcolm Baldrige National Quality Award program to raise awareness about the importance of quality and performance excellence as a competitive edge. Since 1999 the program has outlined criteria for educational institutions to align their mission, values, goals, processes, and resources into a comprehensive long-term systematic improvement effort. The book profiles six unique institutions that have successfully implemented these criteria: the Montfort College of Business at the University of Northern Colorado, National University, New Mexico State University, Carlsbad, Northwest Missouri State University, University of Wisconsin Stout, and Western Wisconsin Technical College. The University of Wisconsin Stout was the first higher education institution to win the Baldrige Award in 2001 and has since worked with educational institutions in 39 states and 25 countries that are interested in implementing quality improvement through the application of the Baldrige criteria. This book will appeal to academic administrators at all levels and at all types of institutions who are interested in applying a systematic

Applying the Science of Learning to University Teaching and Beyond Diane F. Halpern, Milton D. Hakel, 2002-03-26

It is sadly true that most of the way we teach and learn is uninformed by laboratory findings in human cognition Although researchers have made considerable progress in understanding the cognitive and social variables that mediate in the learning process very little of this basic knowledge has been translated into practice many research questions that are critically important for directing educational reform remain unanswered and few in the scientific community have been actively involved in the efforts to reform higher education This edited volume is among many recent attempts to build on empirically validated learning activities to enhance what and how much is learned and how well and how long it is remembered Thus the movement for a real Science of Learning has taken hold the application of scientific principles to the study of learning both under the controlled conditions of the laboratory and in the messy real world settings where most of us go about the business of learning This is the 89th issue of the quarterly Jossey Bass publication New Directions for Teaching and Learning *Learning Spaces* Diana Oblinger, 2006 El espacio ya sea físico o virtual puede tener un impacto significativo

en el aprendizaje Learning Spaces se centra en la forma en que las expectativas de los alumnos influyen en dichos espacios en los principios y actividades que facilitan el aprendizaje y en el papel de la tecnología desde la perspectiva de quienes crean los entornos de aprendizaje profesores tecnólogos del aprendizaje bibliotecarios y administradores La tecnología de la información ha aportado capacidades nuevas a los espacios de aprendizaje ya sea estimulando una mayor interacción mediante el uso de herramientas de colaboración videoconferencias con expertos internacionales o abriendo mundos virtuales para la exploración Este libro representa una exploración continua a medida que unimos el espacio la tecnología y la pedagogía para asegurar el éxito de los estudiantes *Learning Communities* Barbara Leigh Smith, 2004-09-08 Shows how learning communities can be a flexible and effective approach to enhancing student learning promoting curricular coherence and revitalizing faculty Provides the historical conceptual and philosophical context for learning communities and demonstrates that they can be a key element in institutional transformation From publisher description
