

The Snow

Emilie Sanchez

The Snow:

The Snow Adam Roberts, 2018-12-11 The new Adam Roberts novel is a story of global apocalypse old hatreds and new beginnings It is his best novel to date And this is how the world will end The snow started falling on the sixth of September soft noiseless flakes filling the sky like a swarm of white moths or like static interference on your TV screen whichever metaphor nature or technology you find the more evocative Snow everywhere all through the air with that distinctive sense of hurrying that a vigorous snowfall brings with it Everything in a rush busy busy snowflakes And simultaneously paradoxically everything is hushed calm as quiet as cancer as white as death And at the beginning people were happy But the snow doesn't stop It falls and falls and falls Until it lies three miles thick across the whole of the earth Six billion people have died Perhaps 150 000 survive But those 150 000 need help they need support they need organising governing And so the lies begin Lies about how the snow started Lies about who is to blame Lies about who is left Lies about what really lies beneath

Physical Characteristics of the Snow Cover, Fort Greely, Alaska, 1966-67 Michael A. Bilello, Roy E. Bates, James Riley, 1970 Observations were made at 19 sites in and around the Fort Greely Military Reservation in Alaska during the winter of 1966 67 to obtain data on the depth and physical properties of the snow cover Snowfall in 1966 67 totaled 245 cm which was more than 2 1 2 times the seasonal normal Maximum snow depths of 80 to 100 cm were observed in a major portion of the reservation Measurements at nine sites showed that the snow density at Fort Greely was generally light e g the average density in the forest did not exceed 0 24 g cu cm However exceptions such as at Jarvis Creek where the density averaged 0 33 g cu cm could be expected On the average less snow falls at Fort Greely than at other interior Alaskan locations but the average density of the snow cover at all interior Alaska sites is quite light Relationships between snow cover properties and climate were tested using data collected at Fort Greely The results substantiated the relationships between 1 snow hardness and snow density measurements and 2 average snow densities with average windspeed and air temperatures Snow temperature measurements at Fort Greely showed that the snow in the forest was colder than at exposed sites primarily because the average air temperature within the forest canopy was lower than that in the open area Author
