# THE WAKING BRAIN

These systems continue to gain interest for their capacity to modify the excitability of other neural areas and functions. Their close association with the cerebral cortex and with the limbic mechanisms around the hilus of the hemisphere has attracted major research attention both in this country and Europe and is increasingly under study in Latin America, Japan, and the USSR.

Current world literature is reviewed here and related to the work of the Los Angeles group in this expanded and extensively illustrated monograph.

The Second Edition of THE WAKING BRAIN--which originally formed the substance of the Salmon Lectures in 1958--has been expanded to include recent contributions of the Brain Research Institute at UCLA relating to the non-specific systems of the central core of the brain.
