Security Implications of BeiDou-3 Integration in Precision Strike Systems** Alexios Kotsis, 2026-03-16 Academic Paper from the year 2026 in the subject Engineering Safety Engineering The George Washington University Cyber

Security language English abstract Military operations in the present day consider satellite navigation systems as essential cyber physical infrastructure which supports their autonomous systems that include unmanned aerial vehicles UAVs The BeiDou 3 BDS 3 system which became completely operational in 2020 provides enhanced system resilience through its implementation of multi frequency signals and cryptographic navigation message authentication and bidirectional short message communication The system uses these features which create additional security weaknesses because advanced spoofing and command interception and malware distribution through messaging and ground segment security breaches can occur The research investigates BDS 3 cybersecurity threats for drone warfare in Iran which will switch to BeiDou for UAV and missile guidance during the 12 day war with Israel due to GPS jamming threats A refined threat model based on STRIDE incorporates security risks through quantitative measurement while defensive measures get assessed using technological advancements in machine learning ML spoofing detection and multi sensor fusion for GNSS denied navigation and anti jamming methods The results demonstrate that space cyber and autonomous domains require multiple AI powered security measures to achieve operational dominance
