Close *The 15th International Conference on Biomedical Engineering* James Goh, 2013-11-18 This volume presents the processing of the 15th ICMBE held from 4th to 7th December 2013 Singapore Biomedical engineering is applied in most aspects of our healthcare ecosystem From electronic health records to diagnostic tools to therapeutic rehabilitative and regenerative treatments the work of biomedical engineers is evident Biomedical engineers work at the intersection of engineering life sciences and healthcare The engineers would use principles from applied science including mechanical electrical chemical and computer engineering together with physical sciences including physics chemistry and mathematics to apply them to biology and medicine Applying such concepts to the human body is very much the same concepts that go into building and programming a machine The goal is to better understand replace or fix a target system to ultimately improve the quality of healthcare With this understanding the conference proceedings offer a single platform for individuals and organizations working in the biomedical engineering related field to gather and network with each other in so doing create the catalyst for future development of biomedical engineering in Asia

*Neuro-fuzzy Modeling of Multi-field Surface Neuroprostheses for Hand Grasping* Eukene Imatz Ojanguren, 2018-11-03 This thesis presents a novel neuro fuzzy modeling approach for grasp neuroprostheses At first it offers a detailed study of discomfort due to the application of Functional Electrical Stimulation to the upper limb Then it discusses briefly previous methods to model hand movements induced by FES with the purpose of introducing the new modeling approach based on intelligent systems This approach is thoroughly described in the book together with the proposed application to induce hand and finger movements by means of a surface FES system based on multi field electrodes The validation tests carried out on both healthy and neurologically impaired subjects demonstrate the efficacy of the proposed modeling method All in all the book proposes an innovative system based on fuzzy neural networks that is expected to improve the design and validation of advanced control systems for non invasive

Rowell,John Thompson Shepherd,1996      Exercise Loring B. Rowell,John Thompson Shepherd,1996 This is the first section of the Handbook of Physiology to deal

exclusively with exercise It is also the first single volume to analyze in depth the regulation and integration of motor respiratory cardiovascular and metabolic systems over the broad range of functions demanded by exercise Its systematic examination of the regulation of these four systems draws from every area of physiology as well as from pharmacology biochemistry cellular and molecular biology and medicine It highlights exercise as a uniquely powerful means of exploring the integrative aspects of whole body function One feature of this volume is its in depth analysis of the regulatory mechanisms responsible for the close matching of motor respiratory cardiovascular and metabolic control during exercise By combining studies of control at cellular and molecular levels with studies on whole animals this Handbook provides the natural and logical integration that is a hallmark of physiology and is also what lures many scientists to the study of exercise The internationally recognized authors provide a critical analysis of the mechanisms that govern control of movement breathing pulmonary gas exchange blood flow and blood pressure and skeletal muscle metabolism They examine both functional and structural limits to the performance of organ systems under severe stress and show how these limits can be altered by age and physical conditioning In some cases this requires treatment of topics that have not been reviewed before such as how the heart interacts mechanically with the pericardium lung and chest wall to alter central hemodynamics This volume offers a unique synthesis of fresh information and ideas about the physiology of exercise that will provide a basis for future investigations in this field It sets a new standard for the physiological study of exercise and will be of keen interest and lasting value to physiologists sports scientists kinesiologists cardiologists motor control neurologists and physicians
