

# DIFFERENCE THRESHOLD

A difference threshold is the lowest amount of change that an individual can detect. It is measured in terms of how many "just noticeable differences" (JNDs) exist between two stimuli.

## EXAMPLE: VISION

Subtle shifts of coloring, perceivable to the naked eye, are known as visual thresholds. If two colors are close enough in hue and value, they might not be discernible to the human eye. The minimally perceptible difference between these two similar colors is known as the difference threshold.

## ABSOLUTE VS DIFFERENCE

- **Absolute threshold:** the lowest level of stimulation a person can detect. It is useful for measuring a person's sensitivity to stimuli.
- **Difference threshold:** the minimum amount of change in a stimulus that an individual can detect.

**Research Methods in Psychology** Glynis Marie Breakwell, 2006 This Third Edition of this bestselling text retains its status as one of the most accessible practically useful and theoretically rigorous textbooks on the market today and has been developed even further to help students get the most from their studies The textbook is now oriented around three parts focusing on the major processes in conducting research from formulating research questions designing research activity data gathering and analysis A rich diversity of methods is now covered and the book offers extended coverage of qualitative methods now fundamental in psychological methods courses

**Cellular Automata** Alejandro Salcido, 2011-04-11 Cellular automata make up a class of completely discrete dynamical systems which have become a core subject in the sciences of complexity due to their conceptual simplicity easiness of implementation for computer simulation and their ability to exhibit a wide variety of amazingly complex behavior The feature of simplicity behind complexity of cellular automata has attracted the researchers attention from a wide range of divergent fields of study of science which extend from the exact disciplines of mathematical physics up to the social ones and beyond Numerous complex systems containing many discrete elements with local interactions have been and are being conveniently modelled as cellular automata In this book the versatility of cellular automata as models for a wide diversity of complex systems is underlined through the study of a number of outstanding problems using these innovative techniques for modelling and simulation

**Foundations of Pediatric Audiology** Fred H. Bess, Judith S. Gravel, 2006 This book is a compilation of readings representing the basis for the practice of pediatric audiology It contains 47 selected articles each considered critical to understanding the fundamental principles in the field Divided into five sections the book covers the development of audition in infants background information for current practice test techniques and technology and hearing loss in special populations The readings in the book provide a foundation of knowledge for anyone in the field of pediatric audiology

**Textbook of Experimental Psychology** R. S. Woodworth and A. T. Poffenberger, 1920 *Measurement Invariance* Rens Van De Schoot, Peter Schmidt, Alain De Beuckelaer, 2015-10-05 Multi item surveys are frequently used to study scores on latent factors like human values attitudes and behavior Such studies often include a comparison between specific groups of individuals either at one or multiple points in time If such latent factor means are to be meaningfully compared the measurement structures including the latent factor and their survey items should be stable across groups and or over time that is invariant Recent developments in statistics have provided new analytical tools for assessing measurement invariance

MI The aim of this special issue is to provide a forum for a discussion of MI covering some crucial themes 1 ways to assess and deal with measurement non invariance 2 Bayesian and IRT methods employing the concept of approximate measurement invariance and 3 new or adjusted approaches for testing MI to fit increasingly complex statistical models and specific characteristics of survey data The special issue started with a kick off meeting where all potential contributors shared ideas on potential papers This expert workshop was organized at Utrecht University in The Netherlands and was funded by the Netherlands Organization for Scientific Research NWO VENI 451 11 008 After the kick off meeting the authors submitted their papers all of which were reviewed by experts in the field The papers in the eBook are listed in alphabetical order but in the editorial the papers are introduced thematically Although it is impossible to cover all areas of relevant research in the field of MI papers in this eBook provide insight on important aspects of measurement invariance We hope that the discussions included in this special issue will stimulate further research on MI and facilitate further discussions to support the understanding of the role of MI in multi item surveys
