Teachers Totes:

A Study of the Intellectual and Educational Status of High School Pupils in Mississippi Selmer Christopher Larson,1926 **Grade Teacher** ,1956 Teacher ,1976 Contiguity Theory Norvin Richards,2016-06-24 An argument that the word order of a given language is largely predictable from independently observable facts about its phonology and morphology Languages differ in the types of overt movement they display For example some languages including English require subjects to move to a preverbal position while others including Italian allow subjects to remain postverbal In its current form Minimalism offers no real answer to the question of why these different types of movements are distributed among languages as they are In Contiguity Theory Norvin Richards argues that there are universal conditions on morphology and phonology particularly in how the prosodic structures of language can be built and that these universal structures interact with language specific properties of phonology and morphology He argues that the grammar begins the construction of phonological structure earlier in the derivation than previously thought and that the distribution of overt movement operations is largely determined by the grammar s efforts to construct this structure Rather than appealing to diacritic features the explanations will generally be rooted in observable phenomena Richards posits a different kind of relation between syntax and morphology than is usually found in Minimalism According to his Contiguity Theory if we know for example what inflectional morphology is attached to the verb in a given language and what the rules are for where stress is placed in the verb then we will know where the verb goes in the sentence Ultimately the goal is to construct a theory in which a complete description of the phonology and morphology of a given language is also a description of its syntax **My School** Lesley Scanlon,2014-12-17 Education issues feature almost daily in print media online on the radio and on television much of which focuses on the perceived deficits of students and teachers Singled out for special attention are low socio economic status SES schools which are frequently characterised by teachers and students with little investment in learning and teaching Yet within this plethora of educational discussion there is no contemporary longitudinal study of what it means to learn and teach in a disadvantaged school within the policy context of the education revolution in Australia Drawing on 500 interviews conducted over a four period with the Principal parents teachers and students at a regional low SES school this book challenges the profile of one school as represented on the My School website which publishes the results of National Assessment Program in Literacy and Numeracy NAPLAN Chapters situate the original research within an international and national educational context before exploring topics including leadership and management student behaviour constructs of the good teacher the involvement of parents in school and the digital revolution The book closes with an appraisal of the major themes that emerged from the multiple perspectives of the study This is the first book to provide a longitudinal ethnographic study of a school in Australia which examines the impact of the education revolution on the Principal parents teachers and students It comprehensively challenges the official My School representation of a low SES

school and will appeal to researchers in education as well as those involved in postgraduate teacher education and sociology courses both from Australia and internationally
