## **Techniques For Pollination Biologists:**

*Techniques for Pollination Biologists* Carol Ann Kearns, David William Inouye, 1993 *Techniques for Pollination Biologists* is the first book to incorporate all techniques published in the pollination literature as well as unpublished methods compiled from practicing pollination biologists. The bibliography includes 1 200 references from more than 200 journals plus books and previously unpublished materials. Appendices list sources for all the equipment and chemicals needed. This book presents the newest techniques such as fluorescence microscopy to examine pollen tubes, high pressure liquid chromatography for nectar analysis and using particle counters to count pollen grains and nuclear magnetic resonance for floral odor analysis. In addition to these sophisticated methods, basic techniques are described for labeling plants, manipulating flowers, marking or excluding and designing simple but elegant experiments with small budgets. The book also examines potential pitfalls for pollination studies and offers cautionary advice about designing and implementing different types of pollination experiments.

**Methods in Comparative Plant Population Ecology** David Gibson, 2014-10-16 The field of plant population ecology has advanced considerably in the last decade since the first edition was published. In particular, there have been substantial and ongoing advances in statistics and modelling applications in population ecology as well as an explosion of new techniques reflecting the availability of new technologies, e.g. affordable and accurate Global Positioning Systems and advances in molecular biology. This new edition has been updated and revised with more recent examples replacing older ones where appropriate. The book's trademark question-driven approach has been maintained and some important topics such as the metapopulation concept which are missing entirely from the current edition are now included throughout the text.

*Guide to Information Sources in the Botanical Sciences* Elisabeth B. Davis, Diane Schmidt, 1995-12-15 Works cited in this useful survey are appropriate for students, librarians and amateur and professional botanists. These encompass the plant kingdom in all its divisions and aspects except those of agriculture, horticulture and gardening. The majority of the annotations are for currently available in print or electronic reference works. A comprehensive author title and a separate subject index make locating specific entries simple. With materials ranging from those selected for the informed layperson to those for the specialist, this new edition reflects the momentous transition from print to electronic information resources. It is an appropriate purchase for public, college, university and professional libraries.

*Attracting Native Pollinators* The Xerces Society, 2011-02-28 With the recent decline of the European honey bee, it is more important than ever to encourage the activity of other native pollinators to keep your flowers beautiful and your grains and produce plentiful. In *Attracting Native Pollinators*, you'll find ideas for building nesting structures and creating a welcoming habitat for an array of diverse pollinators that includes not only bees but butterflies, moths and more. Take action and protect North America's food supply for the future while at the same time enjoying a happily bustling landscape.

**Using the Biological Literature** Diane Schmidt, 2014-04-14 The biological sciences cover a broad array of literature types from younger fields like molecular biology

with its reliance on recent journal articles genomic databases and protocol manuals to classic fields such as taxonomy with its scattered literature found in monographs and journals from the past three centuries Using the Biological Litera
