fonos a separate distinct program module At implementation time each module and its inputs and outputs are well defined there is no confusion in the intended interface with other system modules At checkout time the in tegrity of the module is tested independently there are few sche duling problems in synchronizing the completion of several tasks before checkout can begin Finally the system is maintained in modular fashion system errors and deficiencies can be traced to specific system modules thus limiting the scope of detailed error searching Usually nothing is said about the criteria to be used in dividing the system into modules This paper will discuss that issue and by means of examples suggest some criteria which can be used in decomposing a system into modules A Brief Status Report The major advancement in the area of modular programming has been the development of coding techniques and assemblers which 1 allow one modu1e to be written with little knowledge of the code in another module and 2 alJow modules to be reas sembled and replaced without reassembly of the whole system *Journal of Object-oriented Programming* ,1995 **Knowledge-based Information Systems** Derek Partridge,Kniff M.
